Forecast narratives in weather responses

API contract · #2798 · verified locally 2026-10-17

Existing weather responses gain an optional `forecastNarrative` object. The warning screen and its types 1–4 stay unchanged. No new endpoint or client code is introduced. A later mobile app update must parse and display the field.

Actual isolated HTTP/Mongo response excerpts below use synthetic provider prose and unrelated weather collaborators. They are not live provider captures or deployed mobile screenshots.

1. Nationwide weather

`GET /v000903/nation/KR` returns the national bulletin at the root. Existing weather/air arrays remain; city items omit duplicate regional narratives.

```
{
  "forecastNarrative": {
    "stationId": 108,
    "region": "전국",
    "announcement": "2026-10-16T08:00:00.000Z",
    "expiresAt": "2026-10-17T08:00:00.000Z",
    "text": "office 108\n○ 18일 비\n* 예상 강수량: 30~80mm\n<img src=x onerror=\"alert(1)\"> & 안내",
    "language": "ko",
    "source": "KMA",
    "textFormat": "plain"
  }
}
```

2. Ordinary regional weather

`GET /v000903/kma/addr/서울특별시` (also Incheon/Gyeonggi) selects office 109. Address and resolved-coordinate weather use the same province mapping.

```
{
  "forecastNarrative": {
    "stationId": 109,
    "region": "서울·인천·경기도",
    "announcement": "2026-10-16T08:00:00.000Z",
    "expiresAt": "2026-10-17T08:00:00.000Z",
    "text": "office 109\n○ 18일 비\n* 예상 강수량: 30~80mm\n<img src=x onerror=\"alert(1)\"> & 안내",
    "language": "ko",
    "source": "KMA",
    "textFormat": "plain"
  }
}
```

3. Office selection

Office	Coverage
108	Nationwide
109	Seoul / Incheon / Gyeonggi
159	Busan / Ulsan / Gyeongnam
143	Daegu / Gyeongbuk
156	Gwangju / Jeonnam
146	Jeonbuk
133	Daejeon / Sejong / Chungnam
131	Chungbuk
105	Gangwon
184	Jeju

Source: data.go.kr 15058629, attached 241128 guide, station workbook category 개황, rows 2–11. Current/historical province aliases are supported. Unknown or foreign regions receive no guessed bulletin.

4. Interpret time and text

17:00 KST is 08:00 UTC. `announcement` and `expiresAt` are true UTC ISO instants. Keep the original line breaks and Korean prose. `textFormat: plain` means literal, untrusted text: bind it as text, never HTML. Markup characters in these examples must remain inert. Prose and its embedded units are not translated or converted.

5. Optional availability

Missing, invalid, wrong-office, future or age ≥24h data omits only `forecastNarrative`. A two-second DB read deadline also preserves weather success; late reads cannot change the response. Requests never call the provider. Cache freshness is capped at 300 seconds and the publication's remaining lifetime.

6. What was verified

The isolated smoke exercised 10 offices, all 17 provinces, real local HTTP and Mongo/Mongoose 5.13.23, shared v000901/v000902/v000903 responses, coordinate selection, national root selection, repeat/new concurrent publications, DB failure, expiry and unchanged warning types 1–4. It does not prove production Mongoose 5.1.2, live regional access, mobile display or deployed readback.

Deployment/restart and origin/public readback need separate operator approval. Restore saved overlays and affected workers for rollback; leave isolated narrative rows unused. Keep issue #2798 open until deployed acquisition/readback is verified. Mobile presentation/localization is #2803.
