TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

1. Read the first-launch notice

Open TodayWeather and read 선택 접근 권한 (Optional permissions). Tap 확인 (OK). The notice retains legacy storage/phone wording; this native app asks Android for location and notifications when needed.

The access notice appears over the start page.

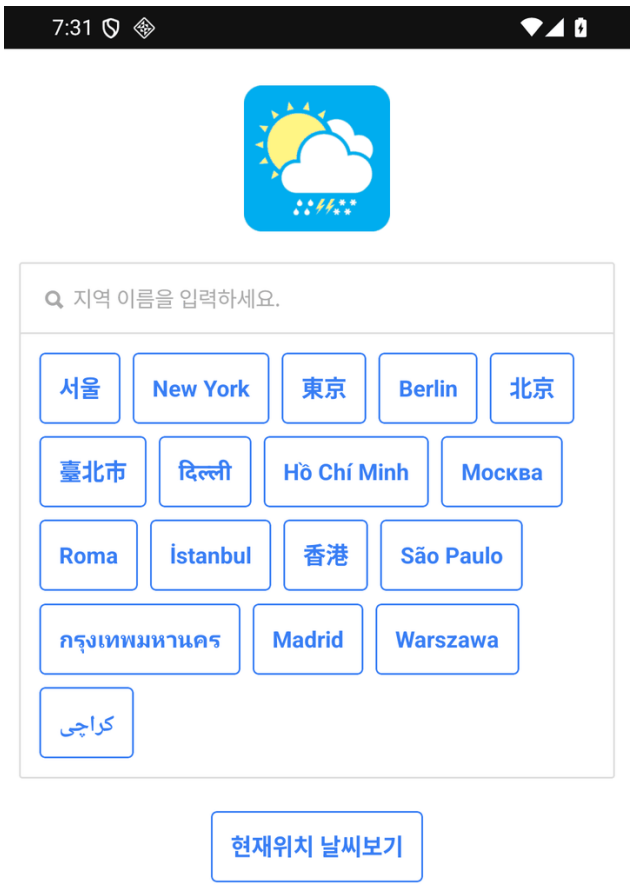

Expected result: The notice closes; the start page remains.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

2. Choose how to start

Tap 현재위치 날씨보기 (Weather at my location), choose a city shortcut, or enter a place in the search field. Internet access is needed for current weather.

The start page offers location, city shortcuts and search.

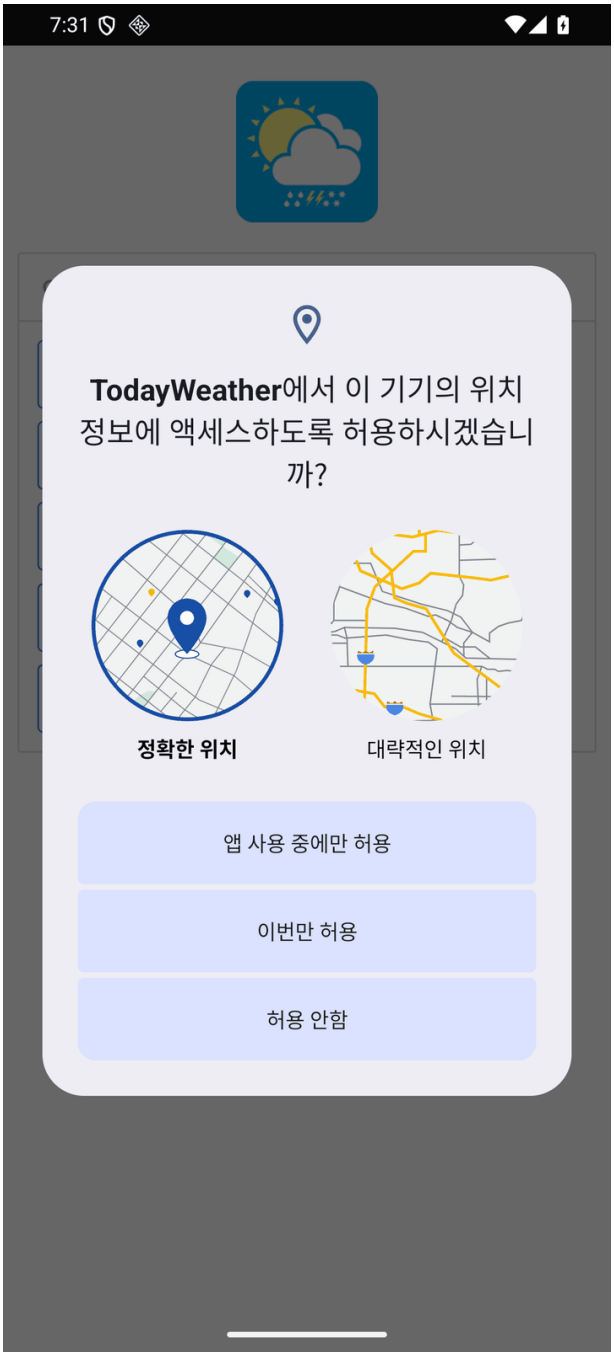

Expected result: A selected place opens its weather. Search also works without location permission.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

3. Allow location when needed

After choosing current-location weather, use the Android permission dialog. Choose 앱 사용 중에만 허용 (While using the app). Approximate location is also supported; it may select a nearby area.

Android asks for location access.

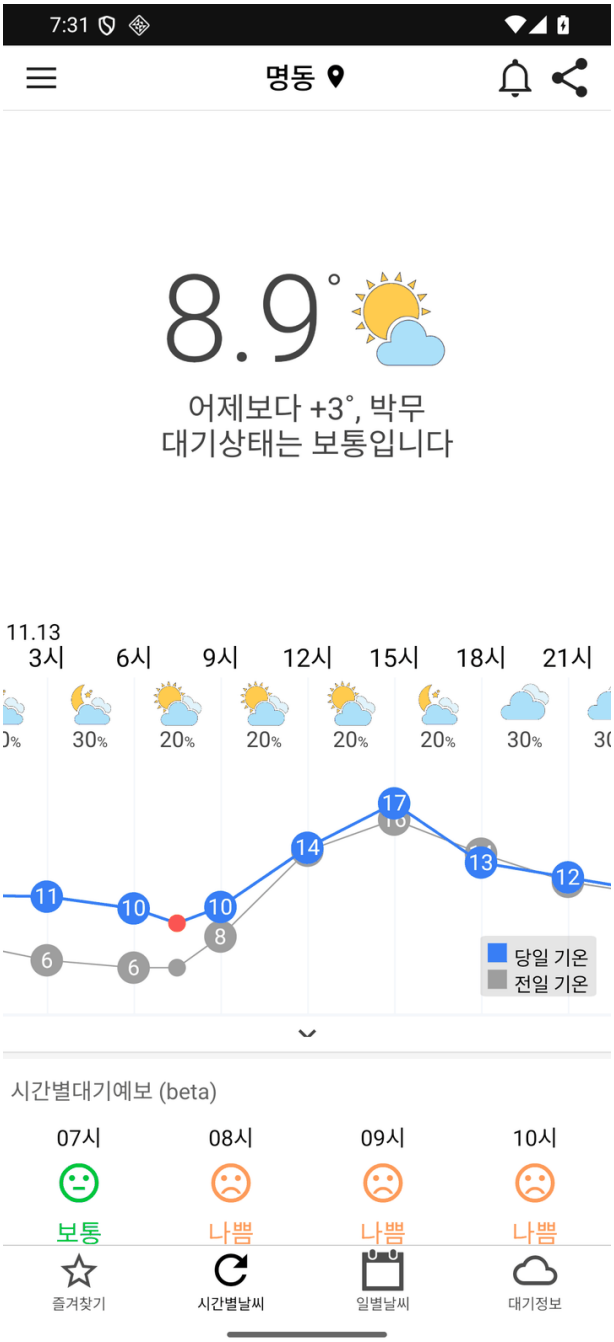

Expected result: The app finds the position and loads its weather. If denied, use place search; a permanently denied permission can be changed in Android Settings.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

4. Recognize your current location

Check the place name and location pin in the header. Use the hourly, daily and air tabs at the bottom. The example uses an emulator position near Seoul City Hall.

Current-location weather after a successful position lookup.

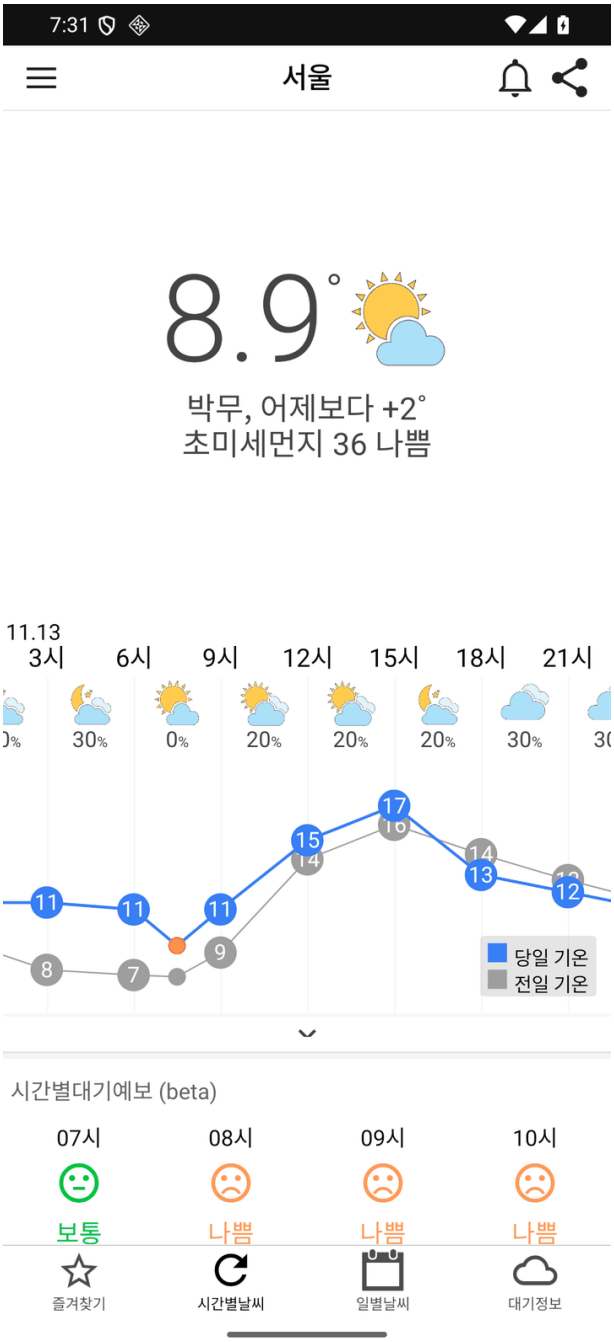

Expected result: The header identifies the area found from the location. Values and place names depend on your position and the latest data.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

5. Read hourly weather

Tap 시간별날씨 (Hourly weather). Read the current temperature and summary, then the hourly sky, precipitation probability and temperature chart. Swipe up to see lower cards.

Hourly weather for a saved Seoul location.

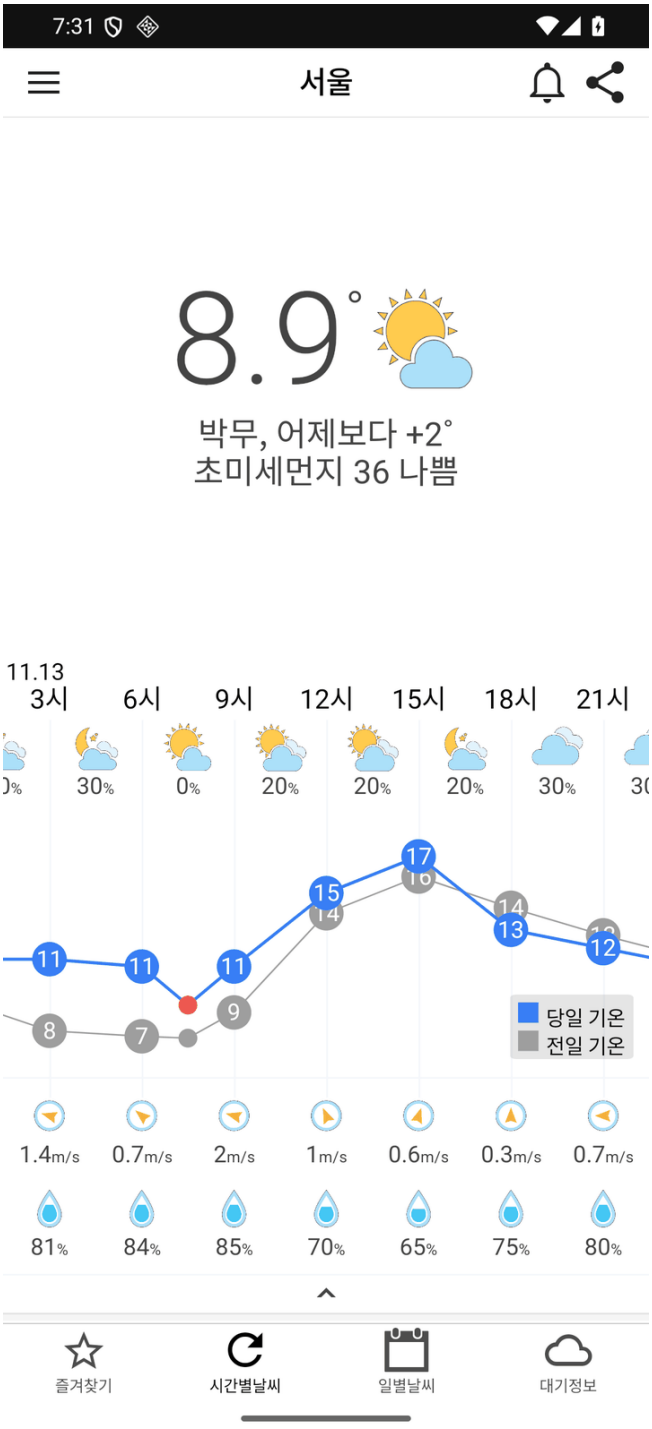

Expected result: The blue chart shows forecast temperatures; the gray comparison shows yesterday where available.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

6. Expand chart details

Tap the downward chevron below the hourly chart. Tap it again to collapse the additional detail rows.

The expanded hourly chart includes wind and humidity information.

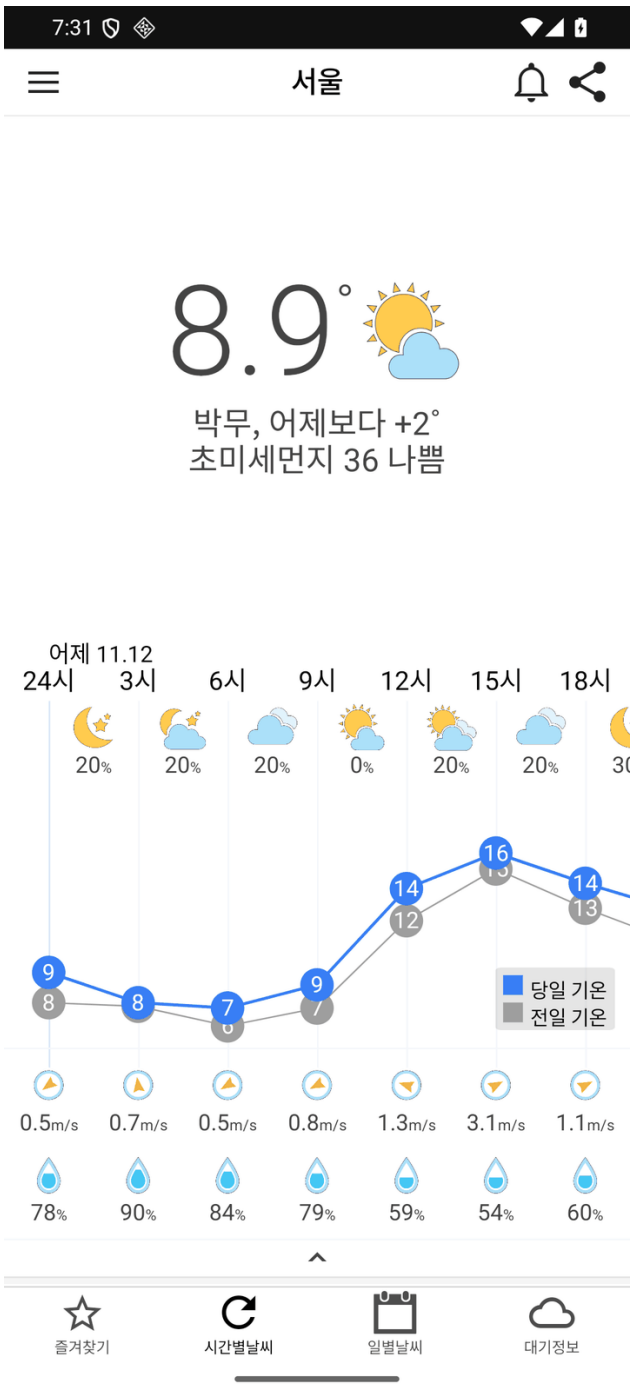

Expected result: The extra rows appear below the temperature plot.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

7. Look at earlier hours

Swipe right across the chart to move toward the earliest available hours. Read the date above the time labels.

The chart at its earliest available position.

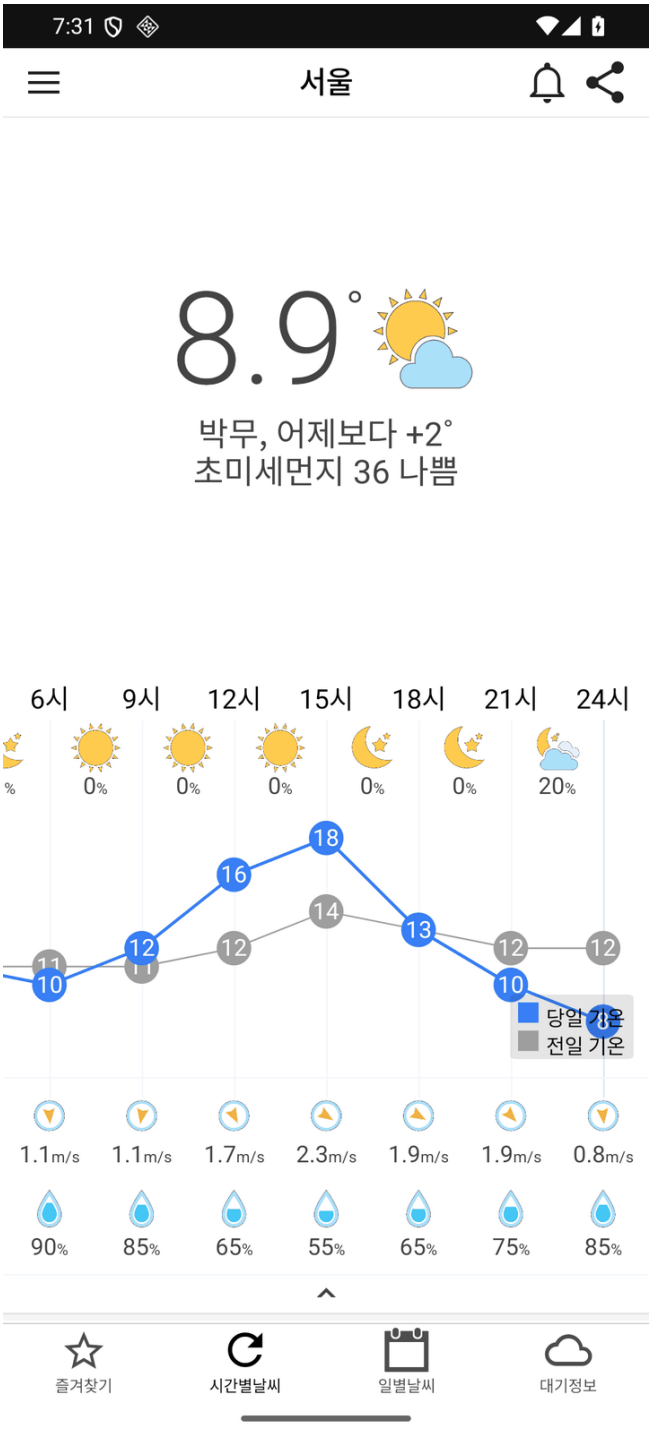

Expected result: Earlier hours become visible; the scroll stops at the available data boundary.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

8. Look at later hours

Swipe left across the chart to move toward the latest available hours.

The chart at its latest available position.

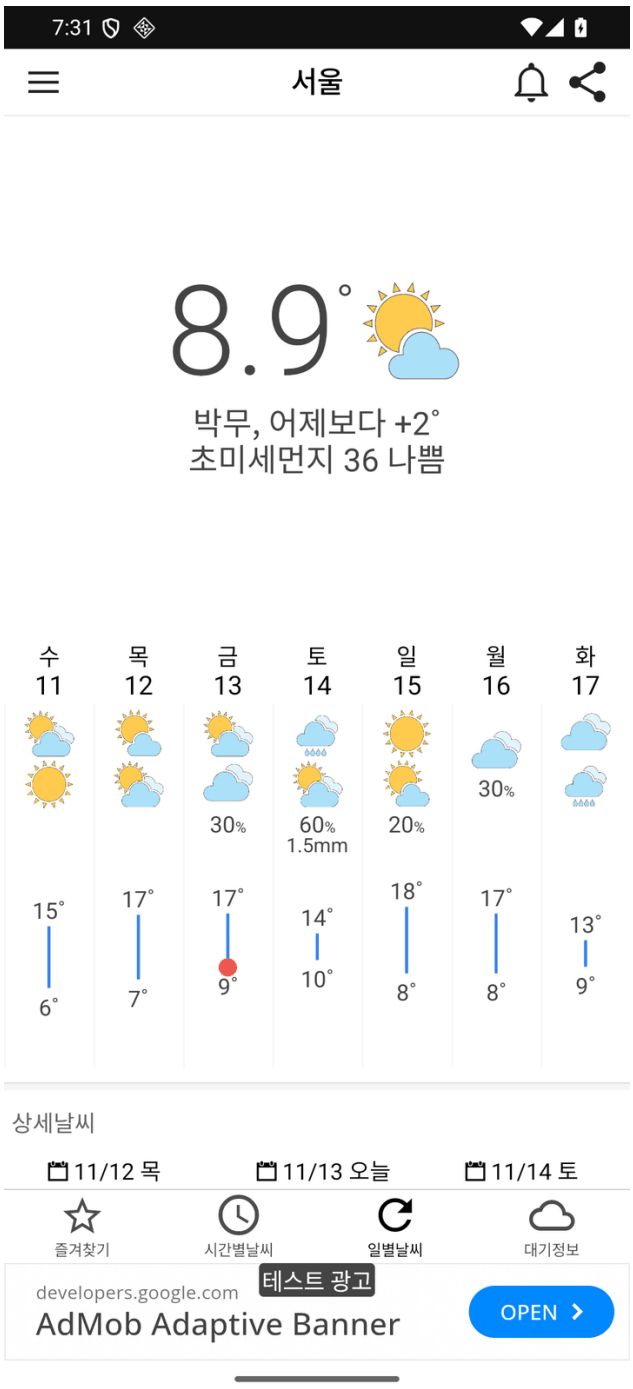

Expected result: Later forecast hours appear. The available range depends on the weather source.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

9. Read daily weather

Tap 일별날씨 (Daily weather). Read the dates, sky symbols, precipitation and low/high temperature ranges. Swipe up for detail cards.

The daily tab at its initial date position.

Expected result: Daily forecast information replaces the hourly chart.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

10. Look at earlier days

Swipe right across the daily chart to view the earliest available dates.

Earlier days in the daily chart.

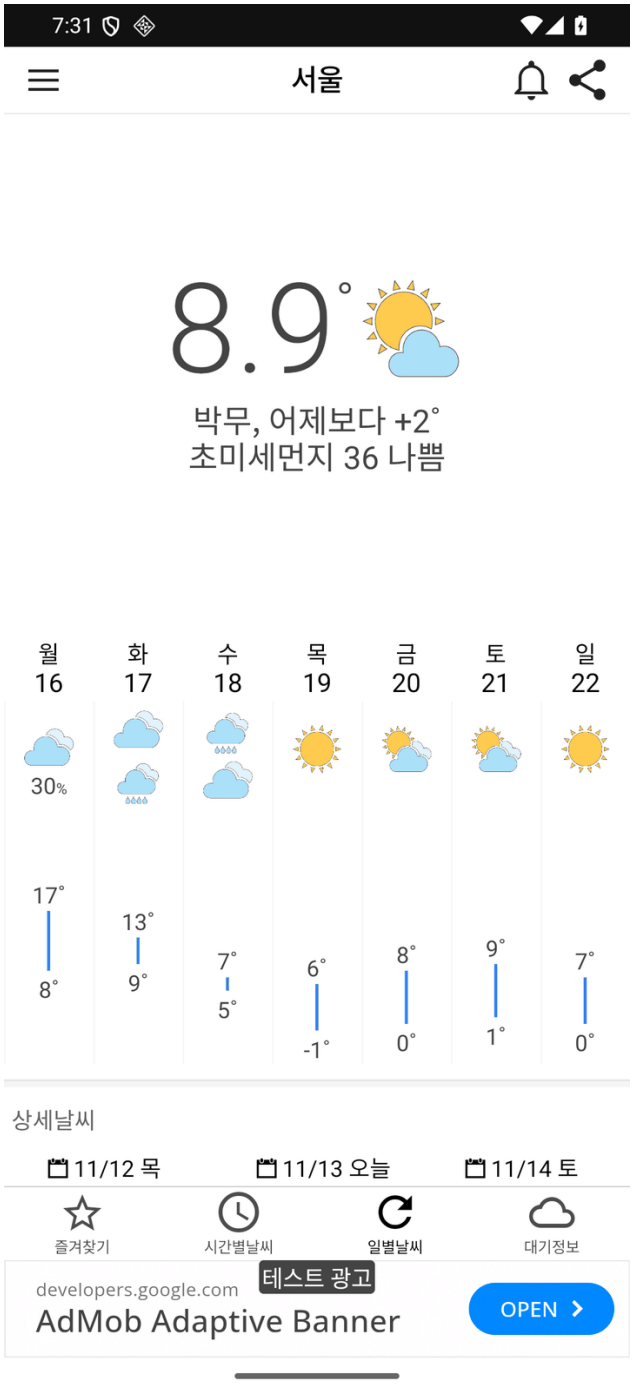

Expected result: Past dates appear where the source supplies them.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

11. Look at later days

Swipe left across the daily chart to view the latest available dates.

The latest dates available in this capture.

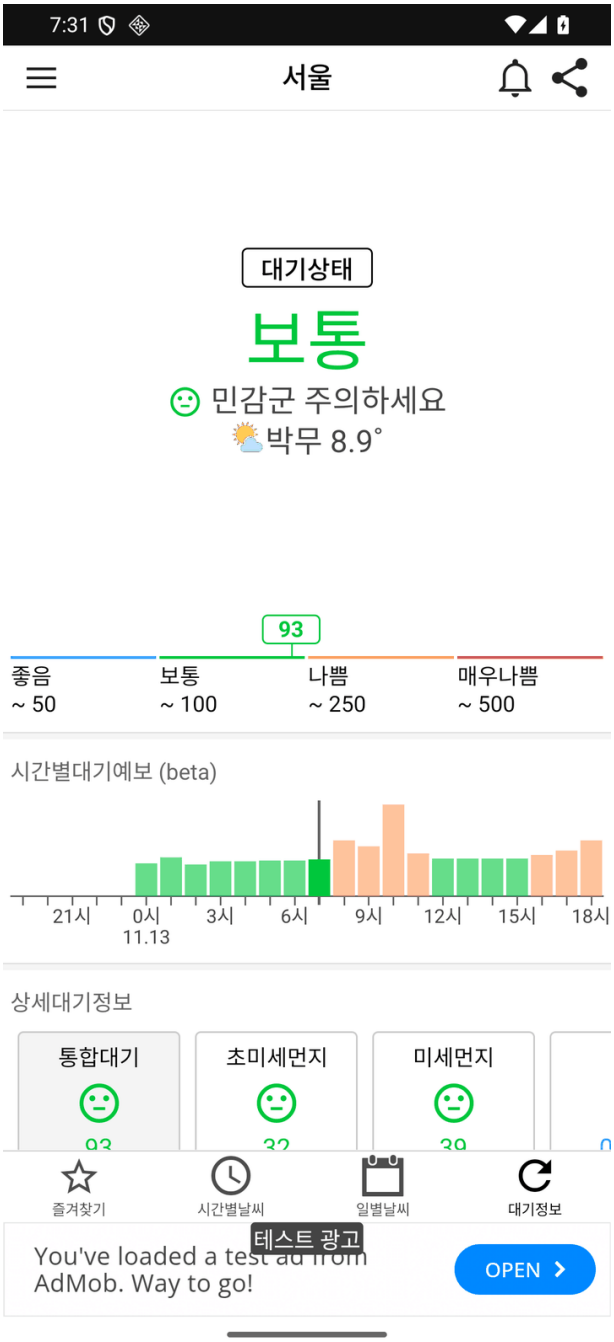

Expected result: Later daily forecasts appear; do not treat the example dates as a fixed forecast window.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

12. Read the air-quality summary

Tap 대기정보 (Air information). Read the grade and advice, then swipe up to see pollutant cards and the information source.

The air-quality tab for Seoul.

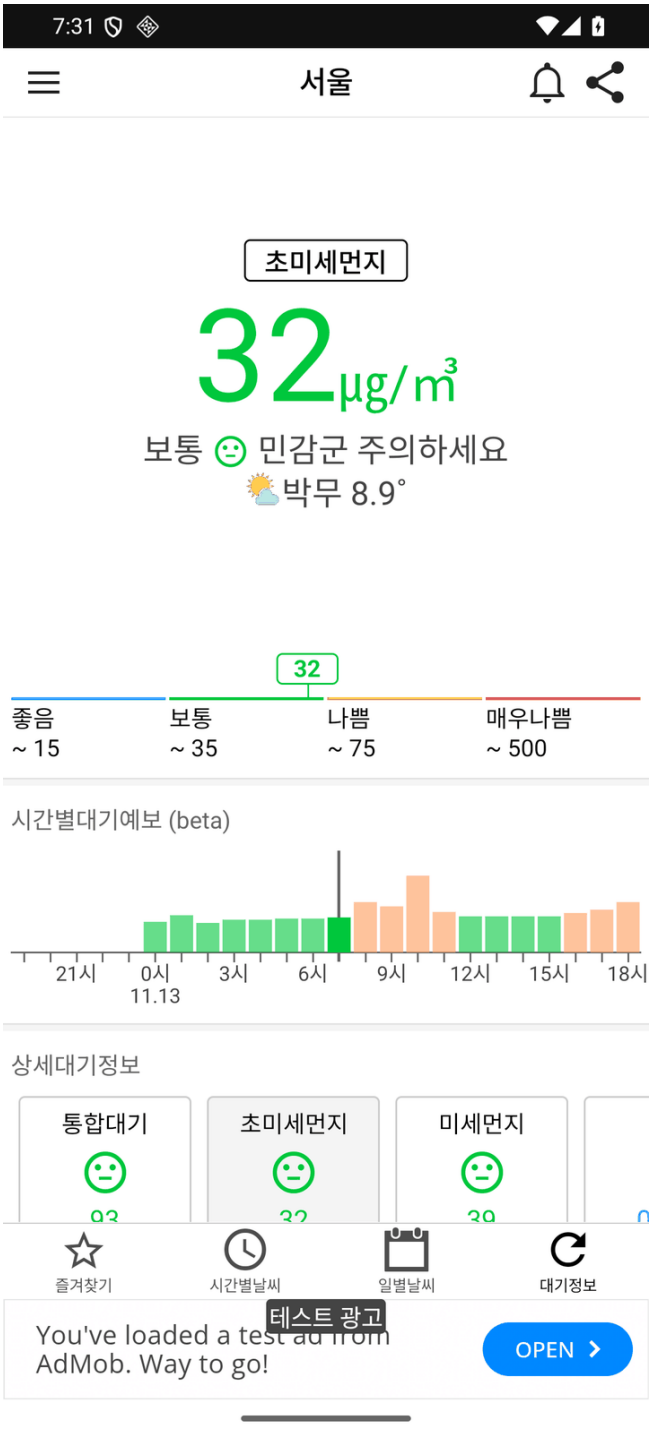

Expected result: The selected air standard controls the grade bands. Missing readings may appear as a dash.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

13. Choose a pollutant

Tap 초미세먼지 (PM2.5) in a pollutant card.

PM2.5 concentration and its grade are selected.

Expected result: The main reading and chart change to the selected pollutant.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

14. Find nearby monitoring stations

Swipe up to 측정소 (Monitoring stations). Compare the available station cards and timestamps.

Station choices and source information below the air charts.

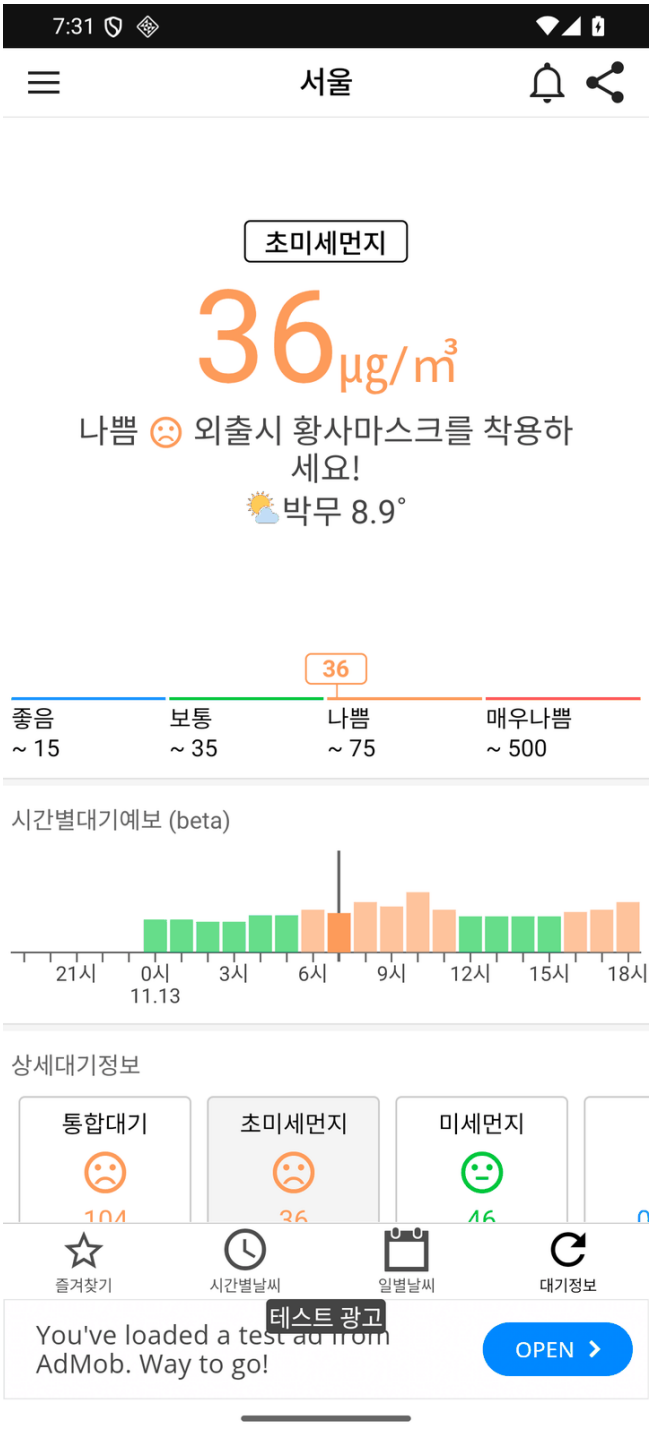

Expected result: The currently selected station is marked; station availability depends on the source.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

15. Change the monitoring station

Tap another station card.

The main air reading after selecting the second station.

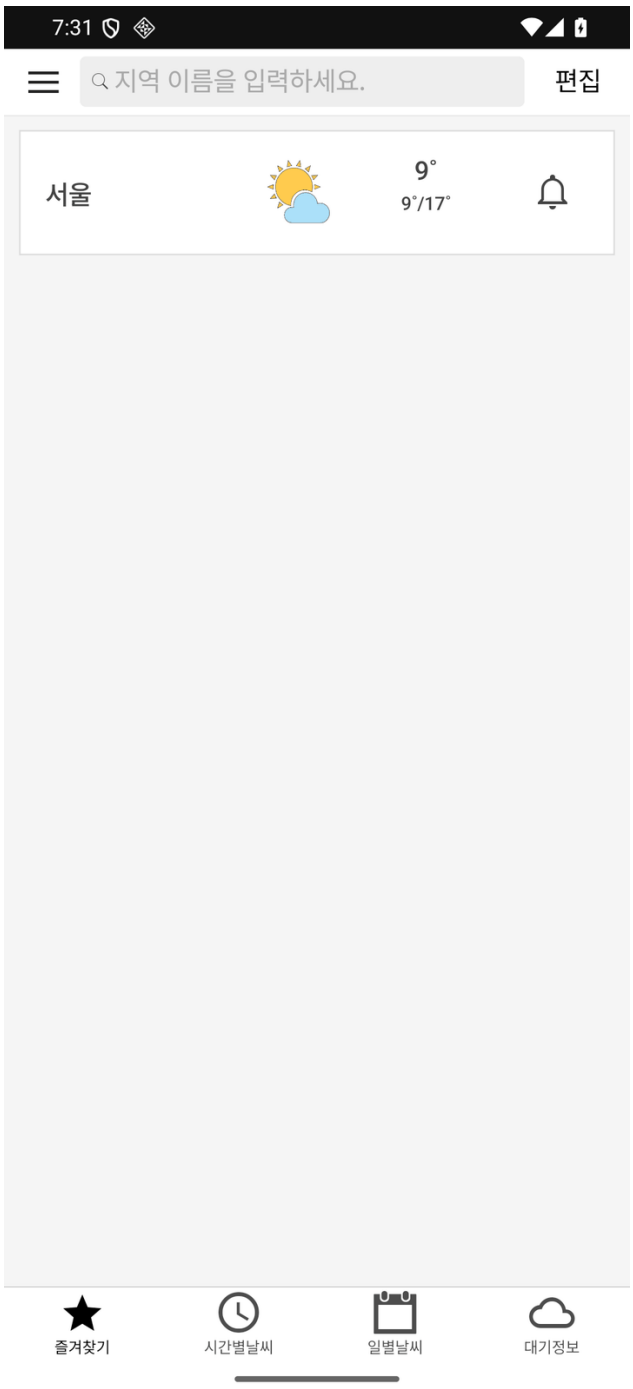

Expected result: The selected card, main value and station information update together.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

16. Open saved places

Tap 즐겨찾기 (Favorites). The current-location entry is separate from saved places. Use the search field to add another place.

The places list with Seoul saved.

Expected result: The list shows the available locations and their alarm buttons.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

17. Search for a place

Enter 부산 (Busan). Review the result name and address before choosing it. If the keyboard is open, the first tap may only dismiss it; tap the result again to select.

Search results for Busan.

Expected result: Choosing a result adds the place and opens its weather. Duplicate places are not added again.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

18. Check the newly added place

Confirm the new place name in the weather header.

Weather after selecting Busan from search.

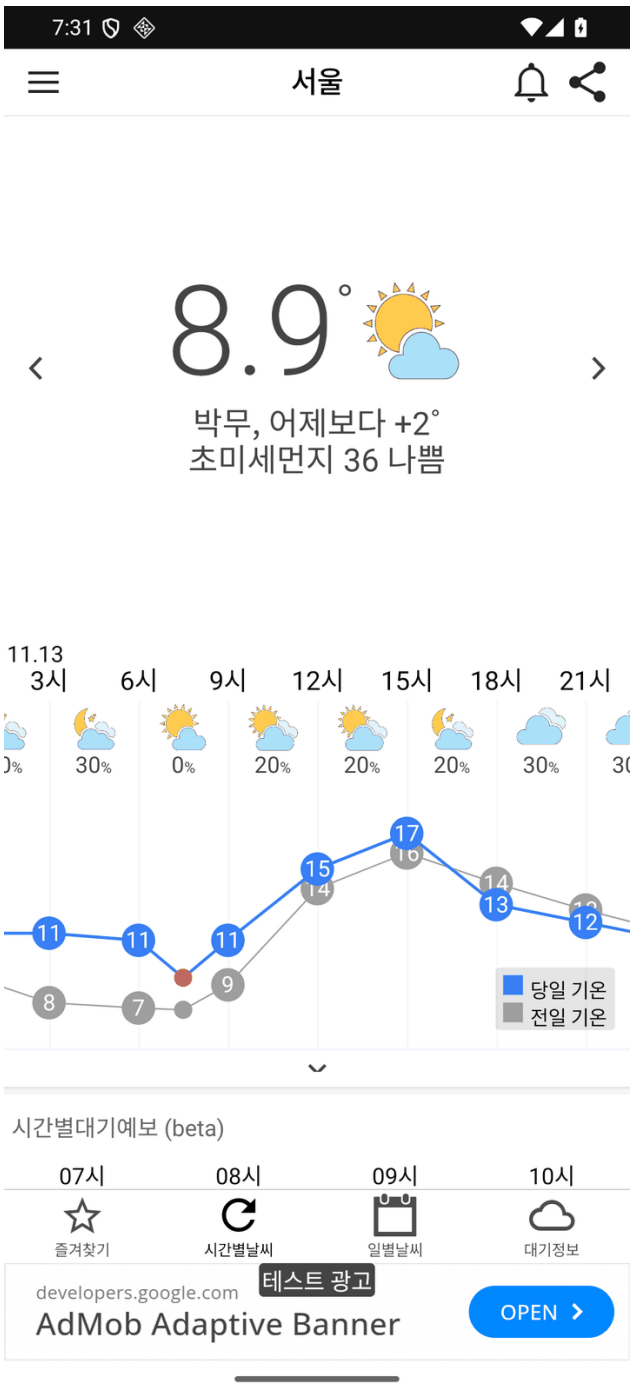

Expected result: The saved-place list gains Busan and weather loads for its coordinates.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

19. Switch between saved places

Use the left/right arrows beside the weather summary, or swipe the header, to move between enabled places.

Seoul selected again after moving from Busan.

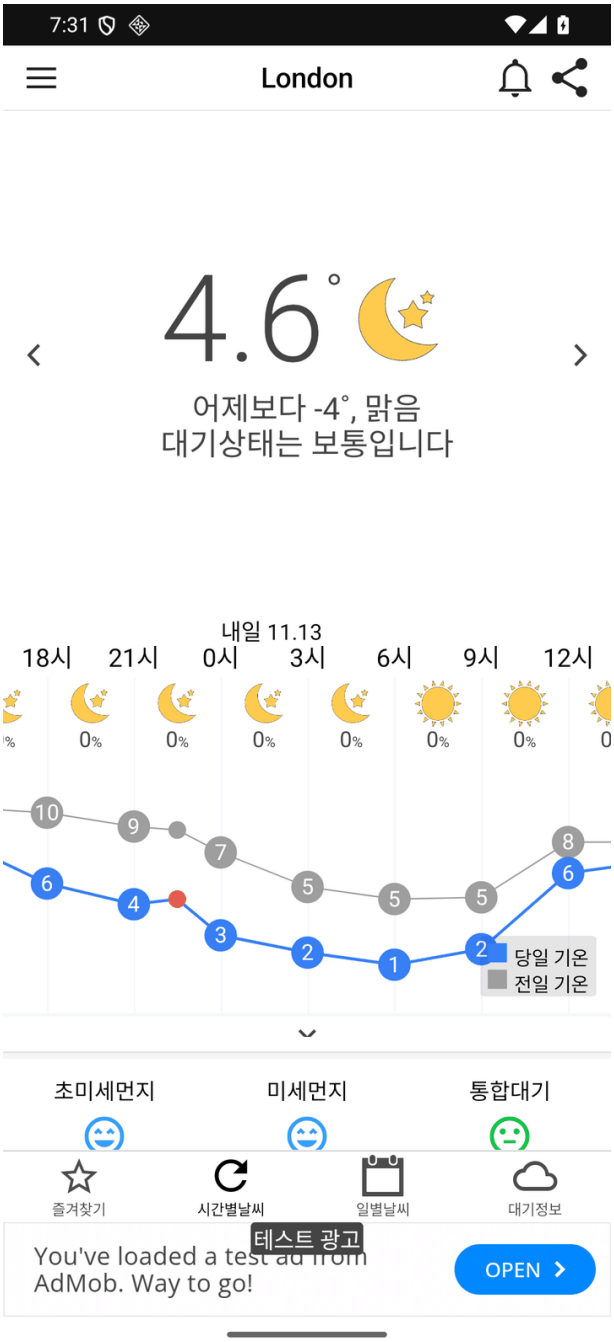

Expected result: The header and weather change to the selected saved place.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

20. Add an overseas place

Return to 즐겨찾기 (Favorites), enter London, and select the matching search prediction. Check its country/address before choosing.

Weather for the selected London result.

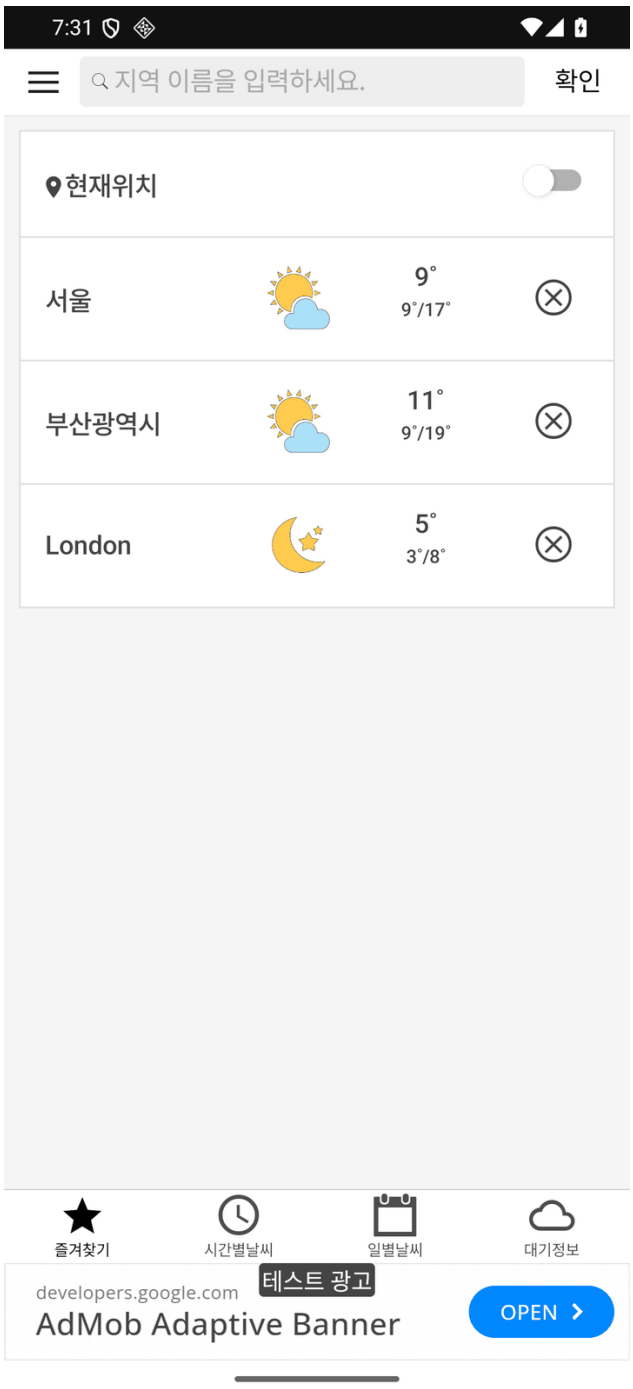

Expected result: The app loads overseas weather. Forecast sources and available details can differ from Korea.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

21. Edit the places list

Open 즐겨찾기 (Favorites) and tap the edit control. Tap the delete control beside the place you no longer need.

Delete controls in the places list.

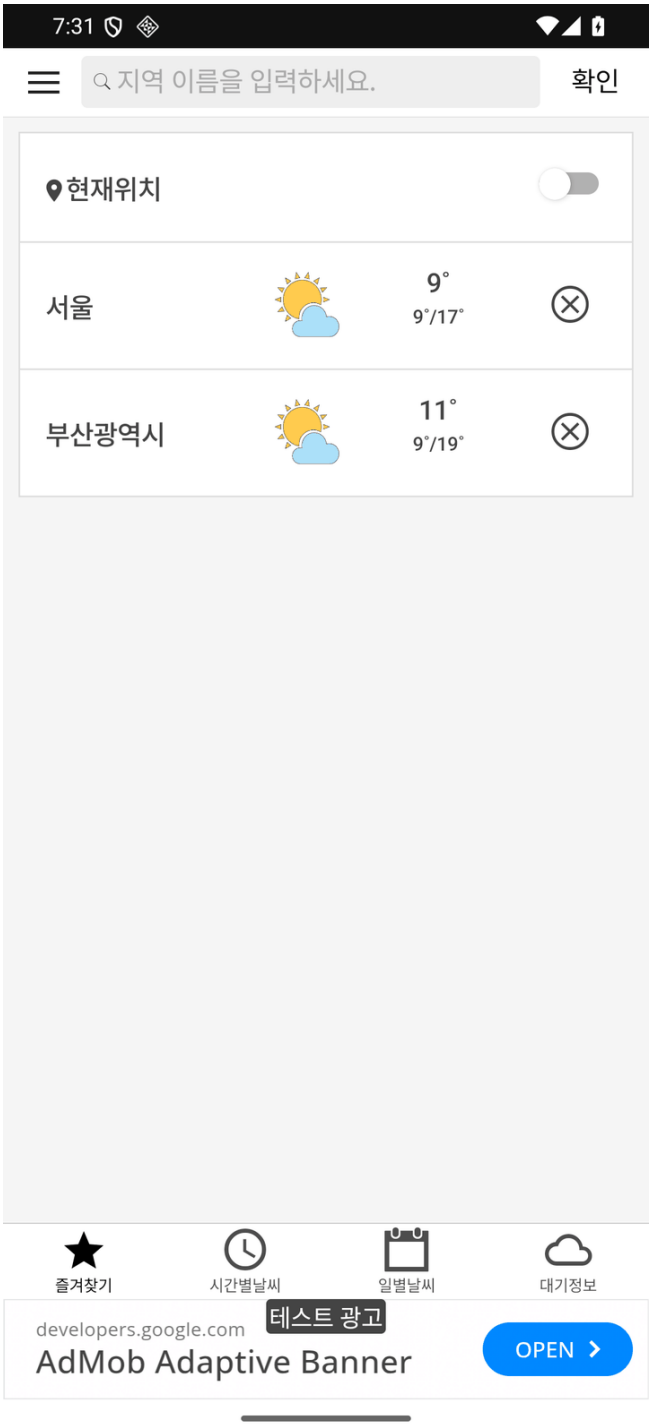

Expected result: Deleting removes that saved place; the current-location entry is managed separately.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

22. Verify a deletion

Check that the deleted place is absent. Leave edit mode when finished.

The list after deleting London.

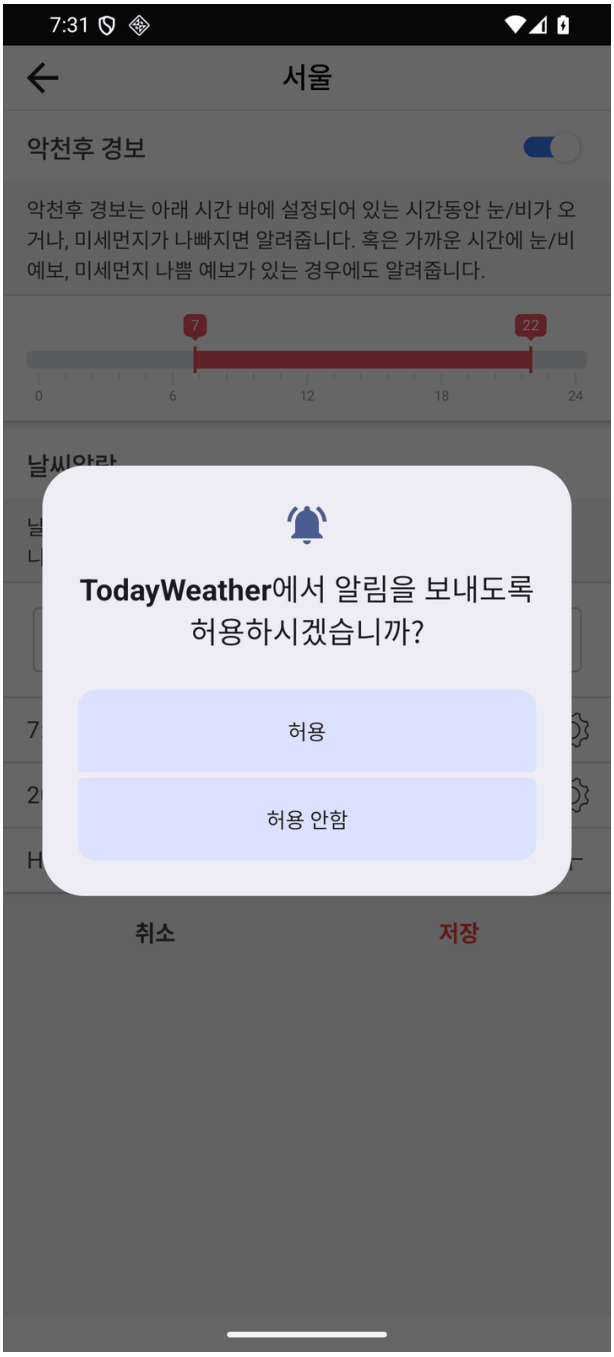

Expected result: The remaining places stay saved. You can search for a deleted place again later.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

23. Allow notifications

Open the bell for a location. On Android 13 or later, tap 허용 (Allow) if you want weather notifications. You can change this in Android Settings later.

Android notification permission for the native app.

Expected result: The permission dialog closes. Permission alone does not save an alarm or guarantee delivery.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

24. Review location-specific alarms

Use the bell in the weather header or beside a saved place. Review the enabled days, weather conditions and scheduled times. Swipe up for lower controls.

Alarm settings for the selected location.

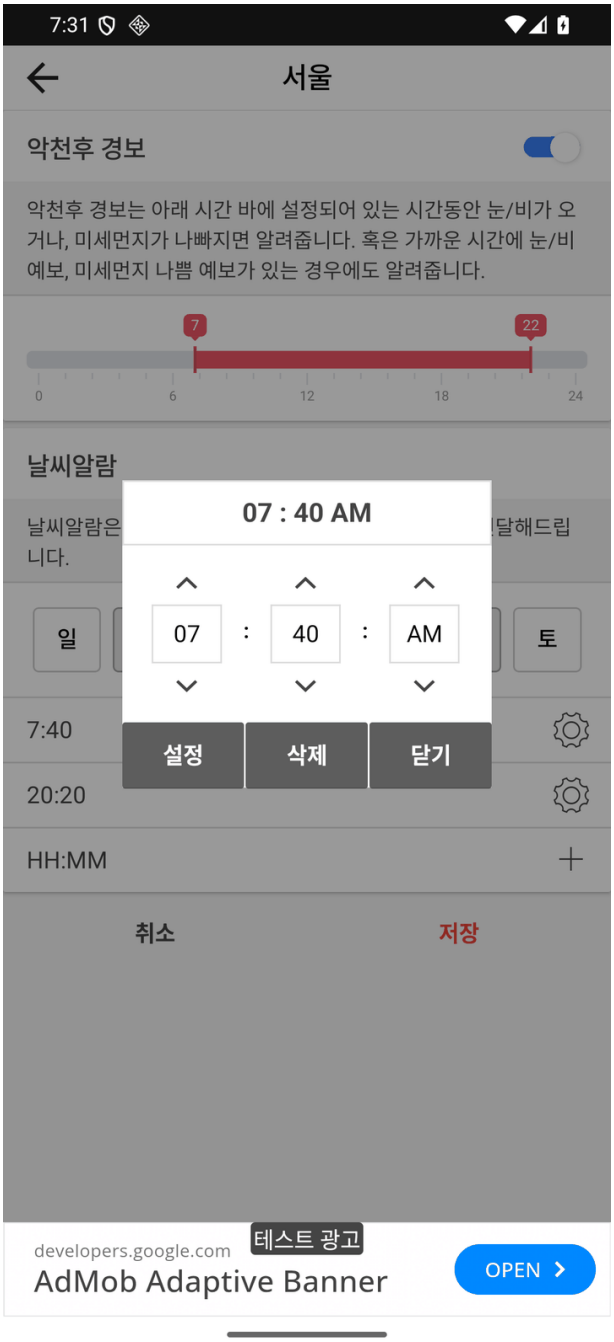

Expected result: Edits apply to this location when saved. The manual capture does not register or deliver a real notification.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

25. Edit a scheduled time

Tap a time row. Use the arrow controls and AM/PM selector, then 설정 (Set) to apply or 닫기 (Close) to cancel. Check the resulting time before saving.

The native time picker.

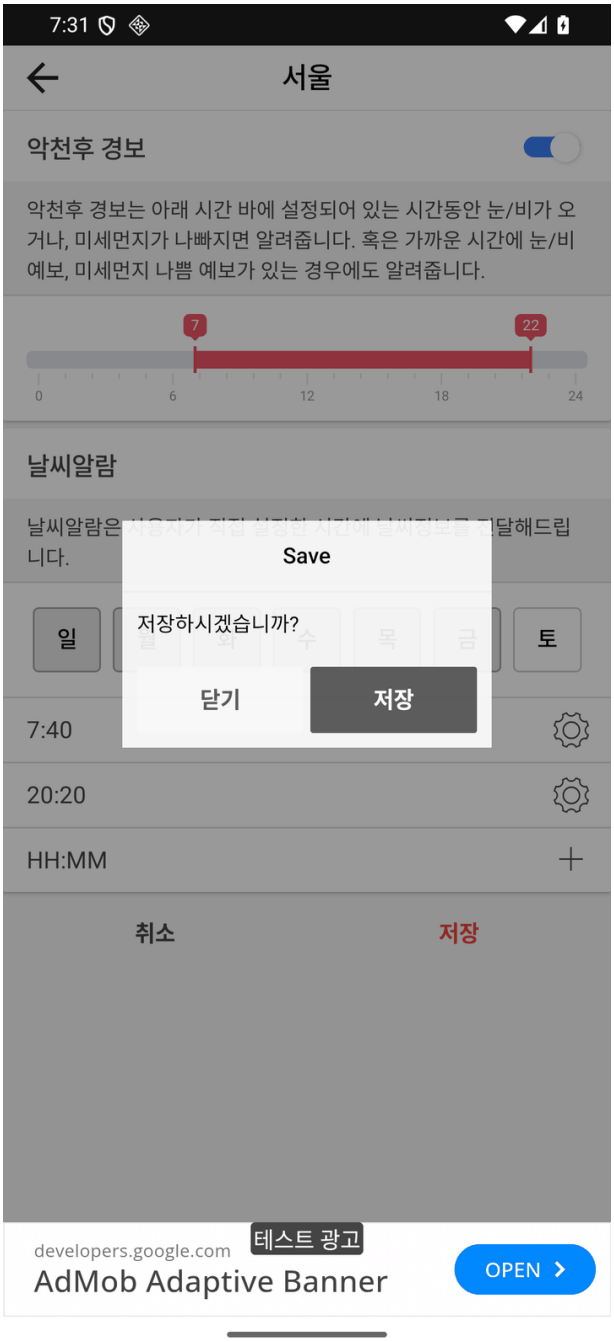

Expected result: The row reflects the chosen time. Known inherited behavior: 12:00 AM deletes a row, noon may open as AM, and 12:30 PM may become 00:30. Avoid these noon values until corrected.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

26. Leave edited alarm settings

After editing, use 취소 (Cancel) or the page back arrow. The app asks 저장하시겠습니까? (Save changes?). Choose 닫기 (Close) to discard or 저장 (Save) to apply. The capture chooses Close.

Save-changes question when leaving an edited alarm page.

Expected result: Close discards the edits. Save applies them and attempts registration when supported. The main 저장 (Save) button saves directly; Android Back leaves without this question.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

27. Open the menu

Tap the three-line menu button. Swipe up in the menu to reach lower settings and information items.

The native app menu.

Expected result: The menu provides nationwide information, units, startup, refresh, theme and privacy controls. Some nationwide items appear only for the Korean region.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

28. Choose measurement units

Open 단위설정 (Units). Tap the measurement you want to change.

Unit settings including temperature, wind, pressure, distance, precipitation and air standard.

Expected result: A choice list opens for the selected measurement.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

29. Choose a temperature unit

Tap the temperature row, then choose C or F.

The temperature-unit choices.

Expected result: The selected row gains a check mark and the unit is saved.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

30. Check the saved unit

Check that F is selected. Use the back arrow to return to Units and then to the weather.

Fahrenheit selected in the temperature list.

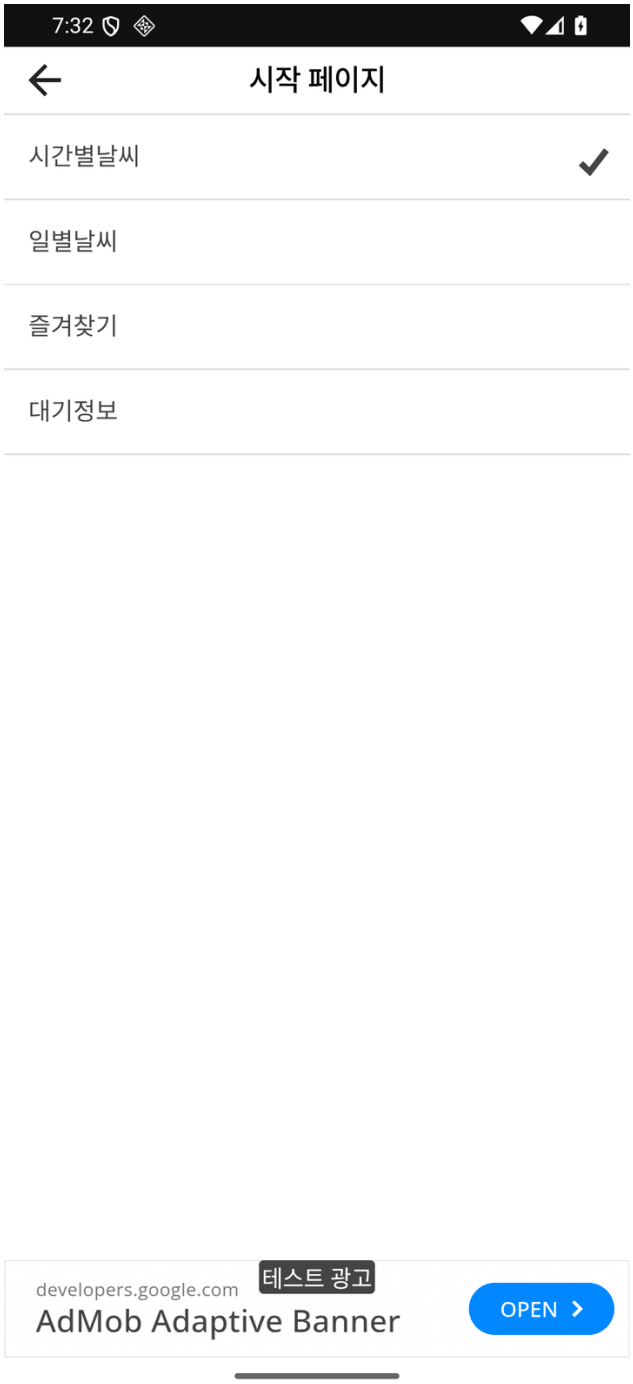

Expected result: Weather temperatures use the saved unit when the data is applied. Change back to C in the same way.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

31. Choose the startup tab

Open 시작 페이지 (Startup page) from the menu. Select the tab you want to see when the app starts.

Startup-page choices.

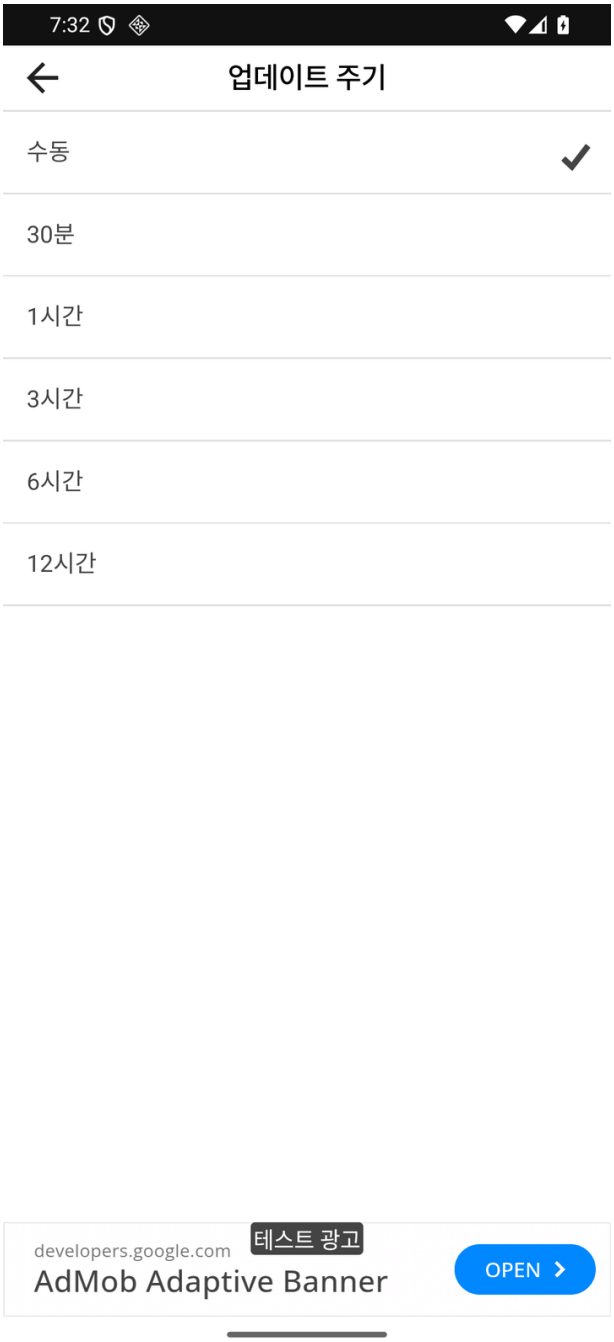

Expected result: A check mark identifies the saved choice. This does not replace the first-launch setup when no place has been configured.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

32. Choose the refresh interval

Open 업데이트 주기 (Refresh interval). Select 수동 (Manual) or an interval. You can also tap the selected weather tab to request a refresh.

Refresh-interval choices.

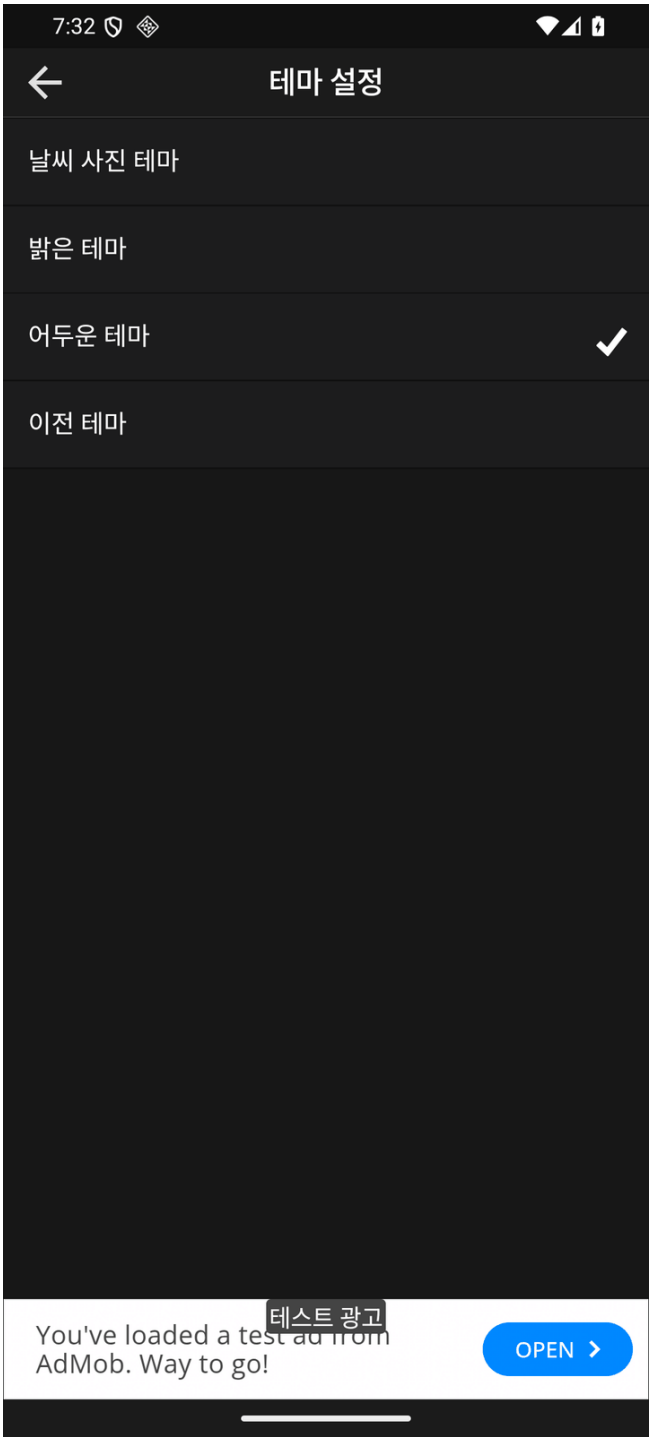

Expected result: The app saves the choice. A refresh needs network access and current data from the provider.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

33. Choose a theme

Open 테마 설정 (Theme) and select 어두운 테마 (Dark theme).

Dark theme selected in the choice list.

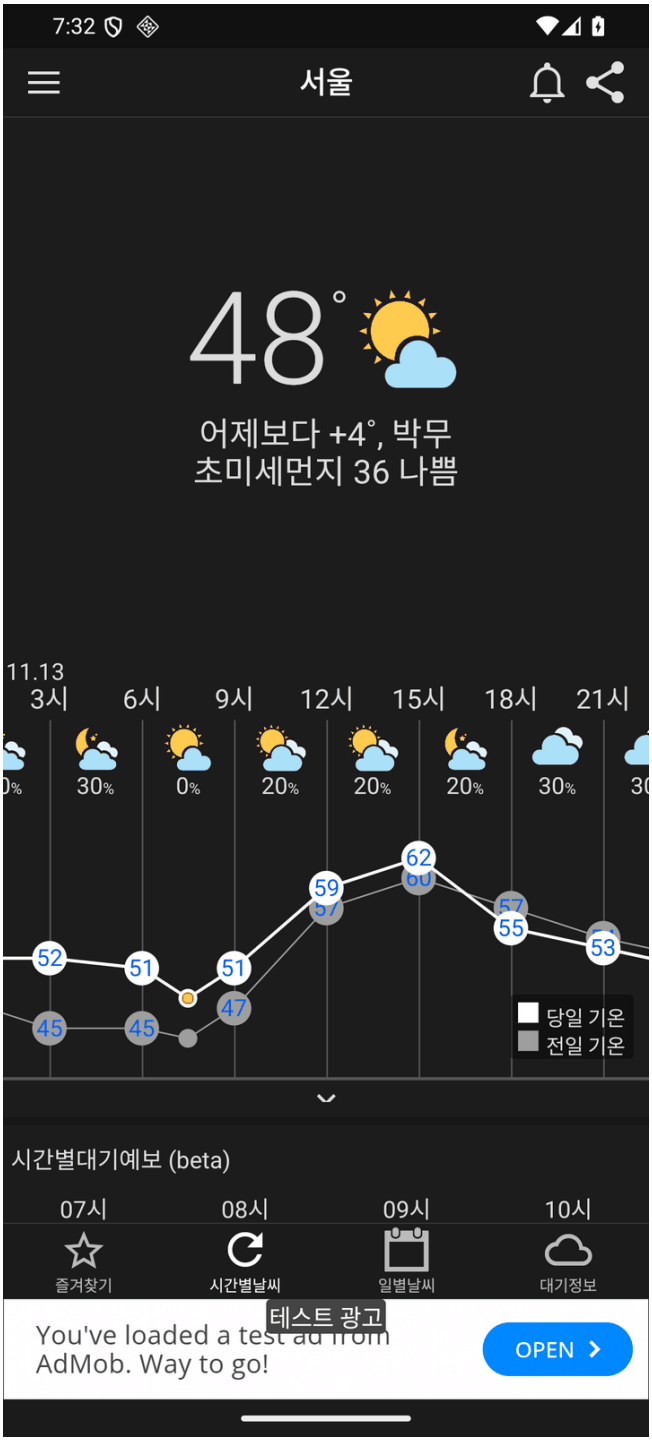

Expected result: The page colors change and the choice is saved.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

34. Read weather in dark theme

Return to the weather tab after selecting the dark theme.

The hourly page in dark theme.

Expected result: The same weather information appears with the selected theme colors.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

35. Use the photo theme

Choose 날씨 사진 테마 (Photo theme) and return to weather. Allow the photo feed and image to load.

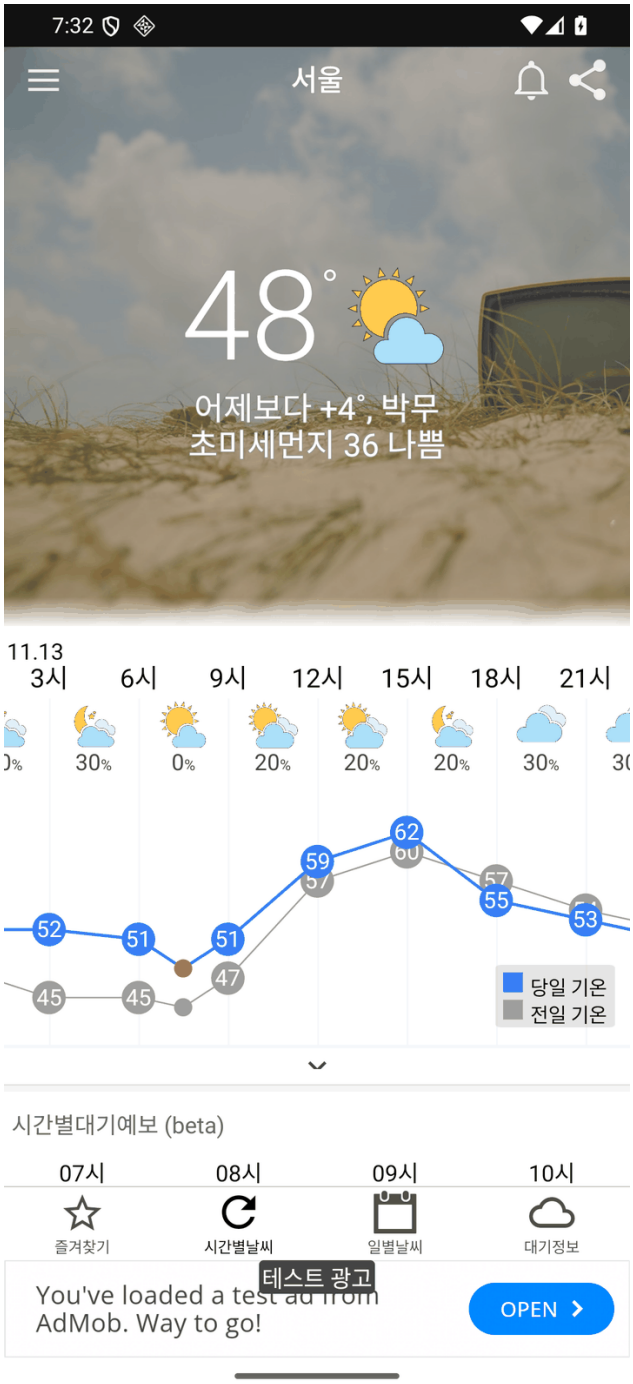

Photo theme on the weather header.

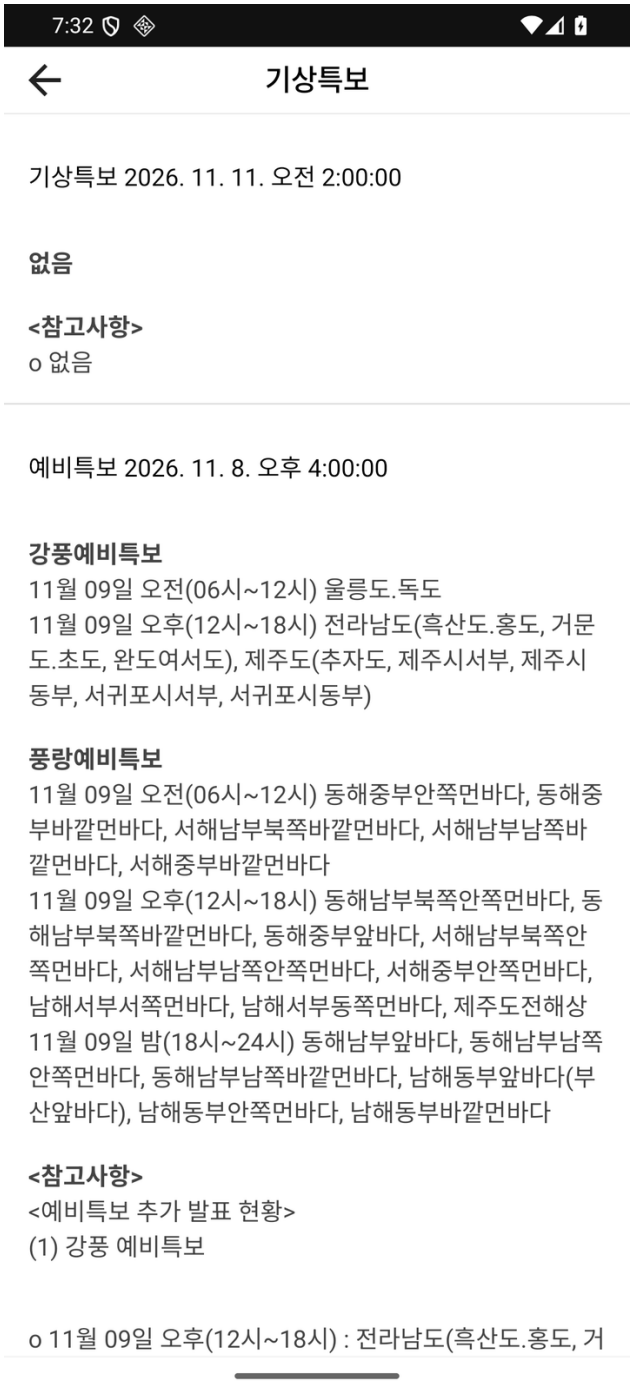

Expected result: A photo appears when available. If the feed or image cannot load, the app may show its fallback background.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

36. Read weather warnings

From the menu, open 기상특보 (Weather warnings). Swipe to read any available bulletins.

The current warnings page at capture time.

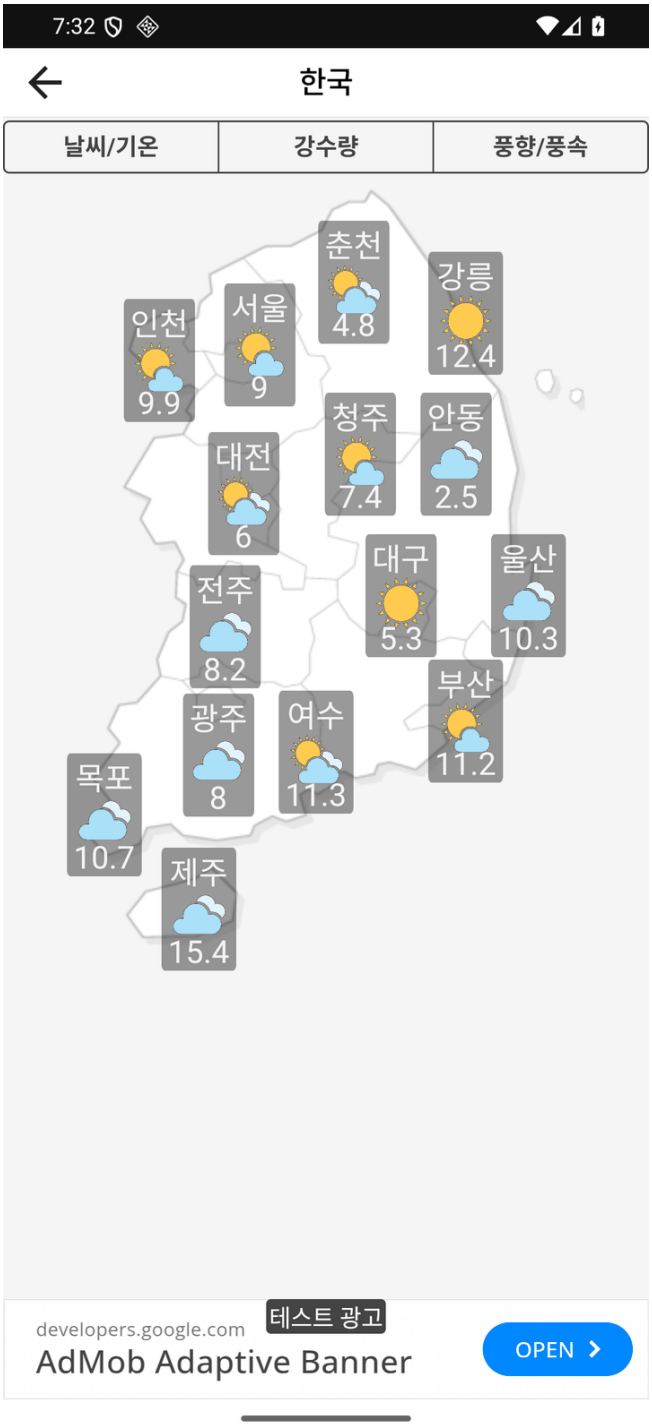

Expected result: The page shows bulletins supplied by the source, or an empty state when none are available. Check the announcement time.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

37. View nationwide weather

Open 전국날씨 (Nationwide weather). Read the city labels and values.

The nationwide weather map.

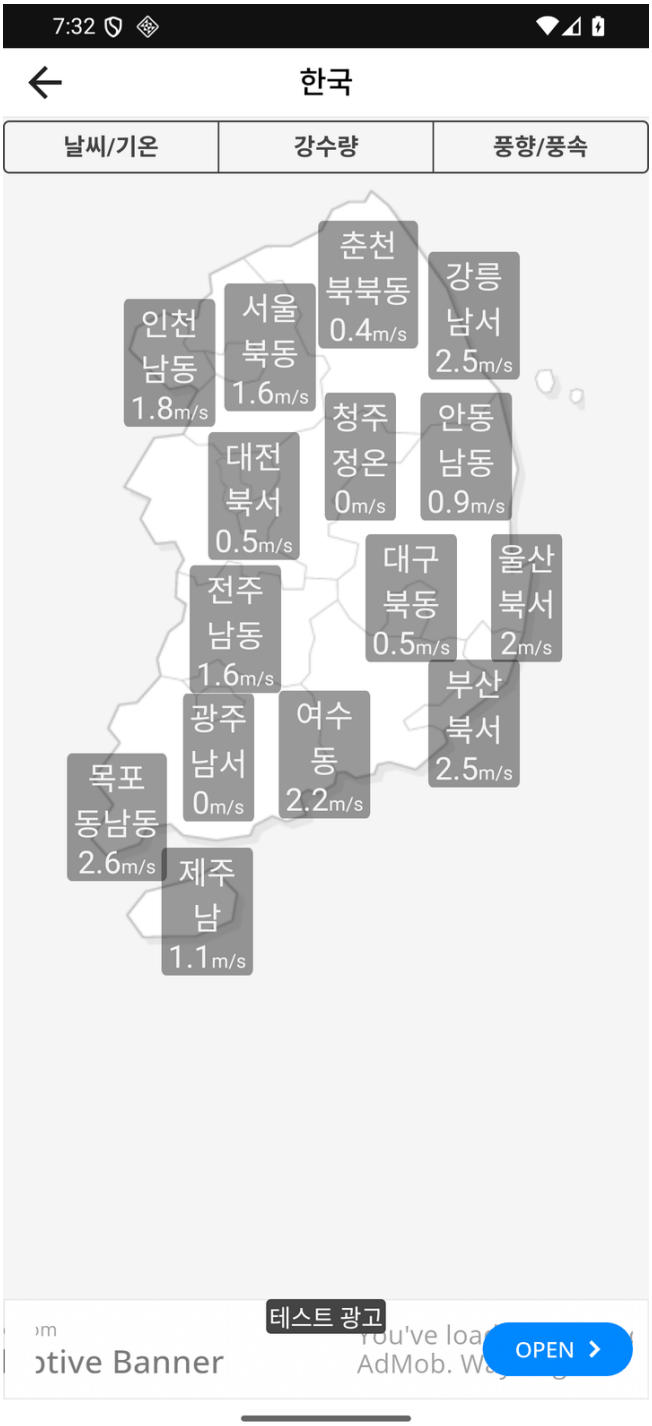

Expected result: Weather values appear for the listed Korean cities when supplied by the source.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

38. Change the nationwide map mode

Use the mode controls on 전국날씨 (Nationwide weather) to view wind.

Nationwide wind mode.

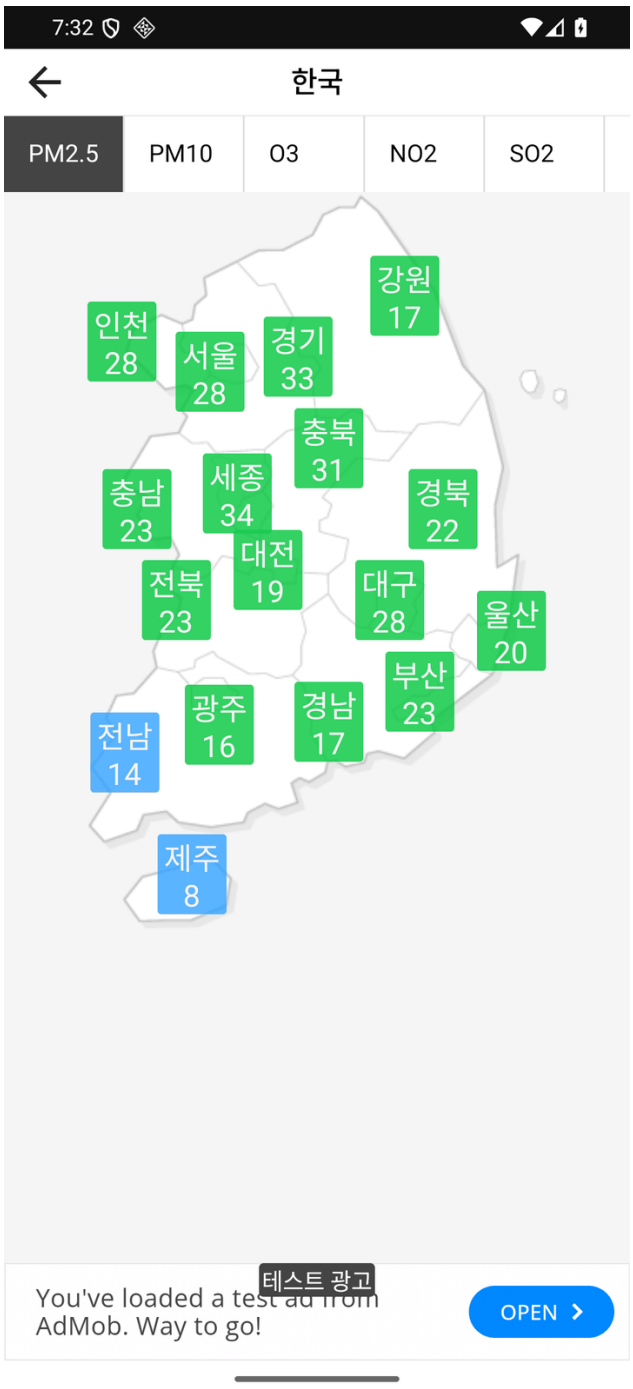

Expected result: The map labels change to wind direction and speed.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

39. View nationwide air quality

Open 전국미세먼지 (Nationwide air). Choose a pollutant in the tab strip; swipe the strip if an option is off-screen.

The nationwide air-quality map.

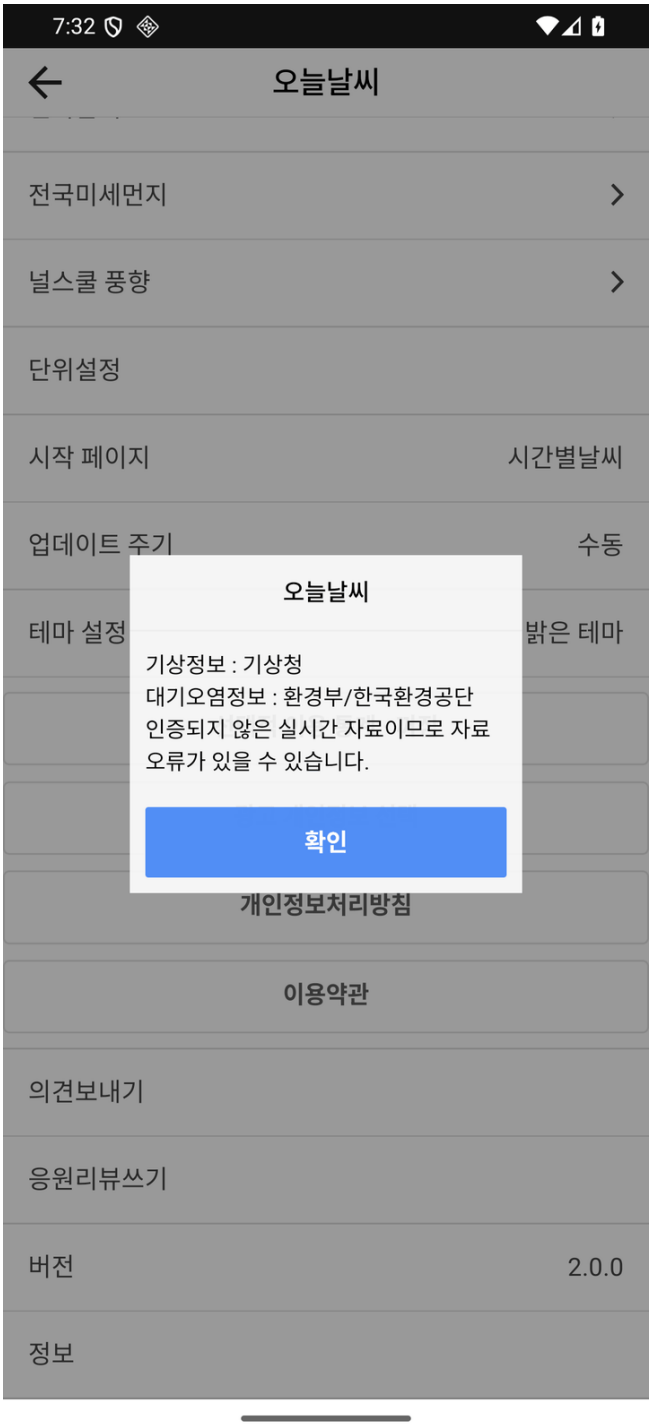

Expected result: Regional values and colors change with the selected pollutant and available readings.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

40. Read app information

Open 정보 (About) from the menu. Read the version and application information, then close the dialog.

The About dialog over the menu.

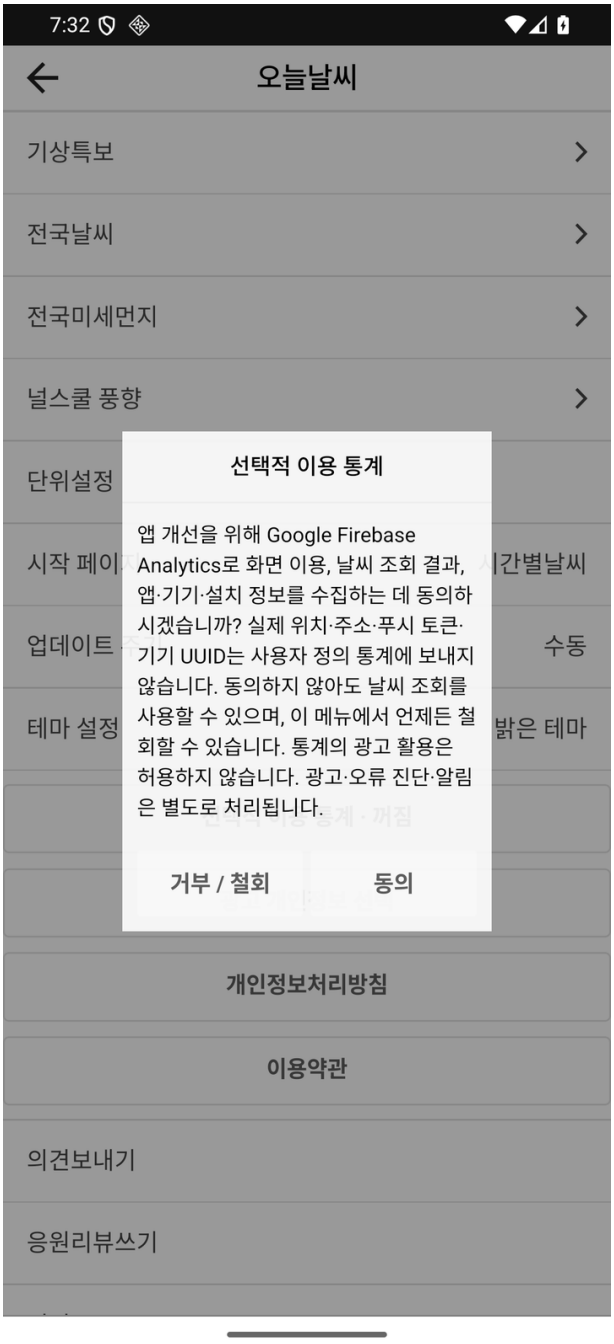

Expected result: The menu remains when the dialog closes.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

41. Choose optional usage statistics

Open 선택적 이용 통계 (Optional usage statistics). Read the explanation and choose whether to allow collection. This manual keeps collection off.

The optional analytics choice.

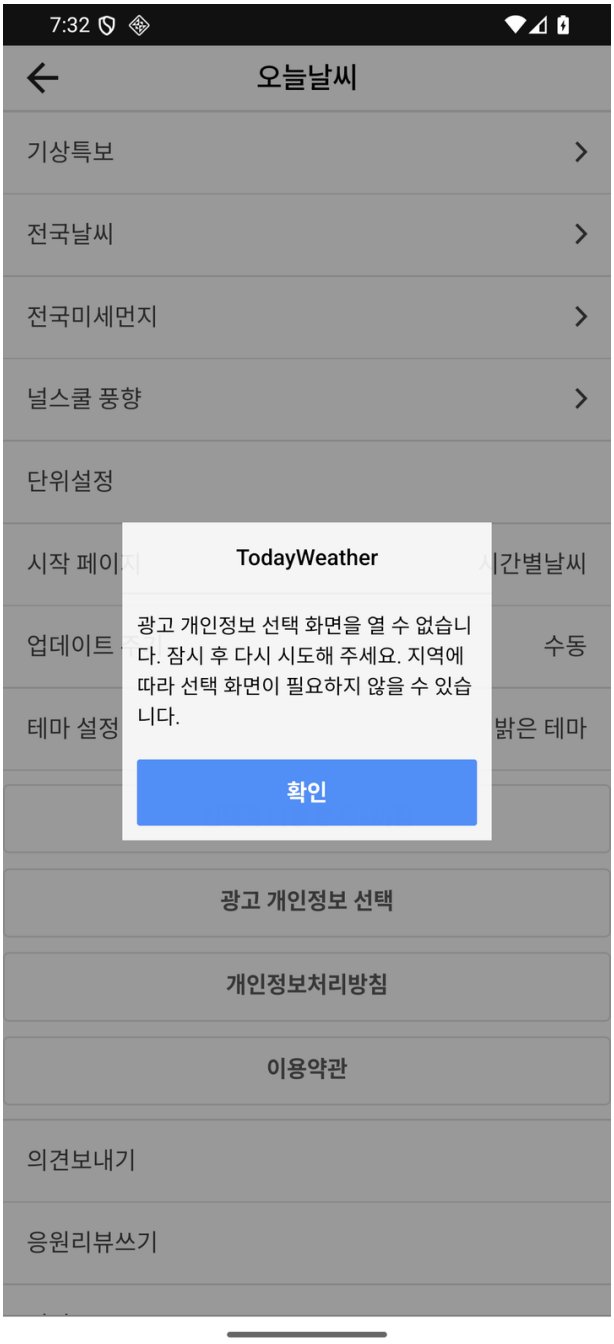

Expected result: Your choice is saved. Withdrawing consent disables collection. A choice made in the old app is not automatically treated as native consent.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

42. Review advertising privacy options

Open 광고 개인정보 선택 (Ad privacy choices). The available form depends on the advertising consent service and region.

The ad-privacy response in this capture environment.

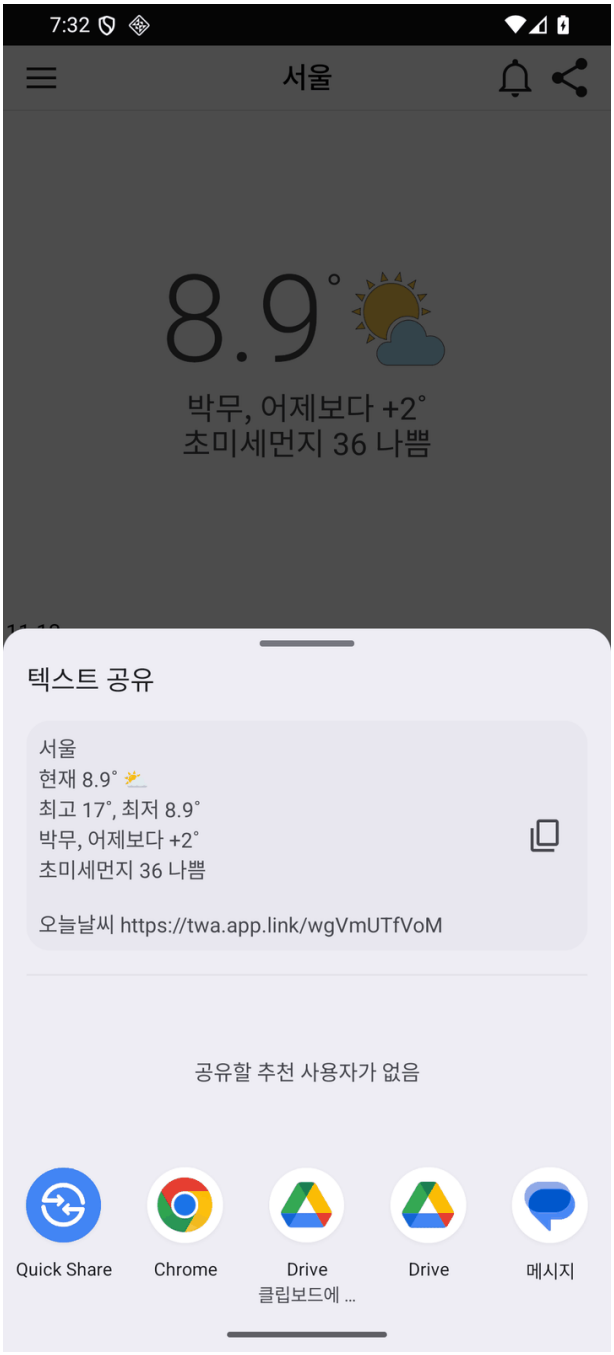

Expected result: A form opens when required; otherwise an explanatory message appears. This is separate from optional usage statistics.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

43. Share weather using Android

Tap the share icon in the weather header. Review the Android chooser and choose an app only if you want to send the weather text. Back cancels.

The Android share chooser; no recipient is selected.

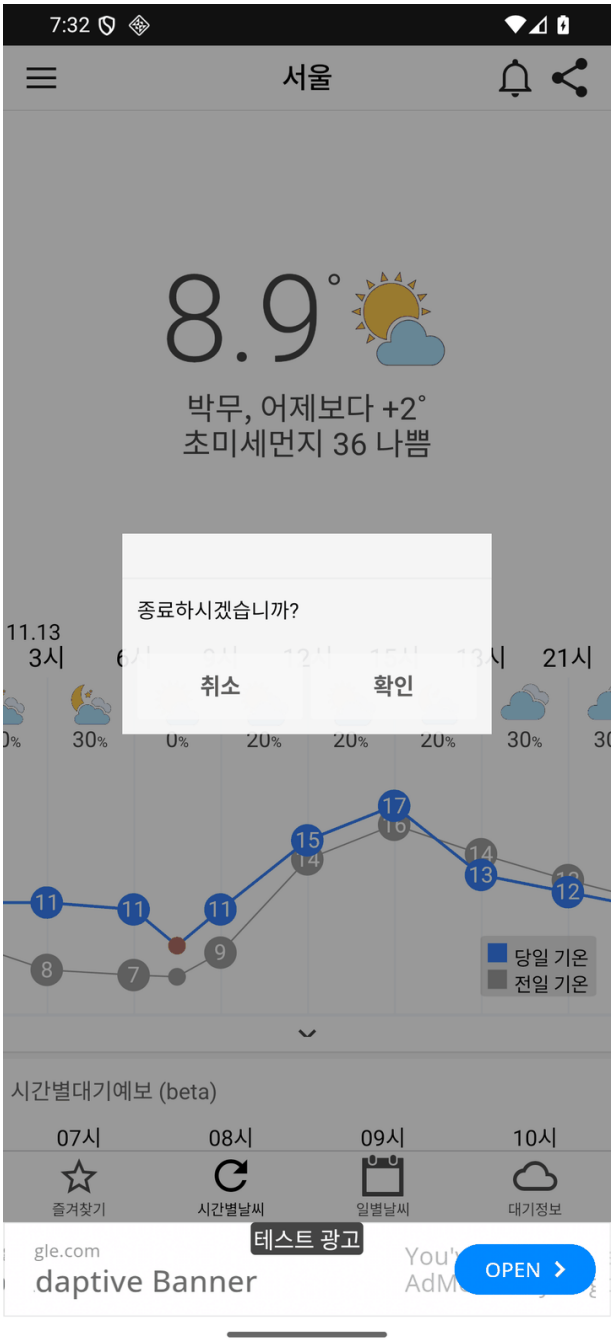

Expected result: Android hands a text weather summary and app link to the chosen app. This manual stops before sending anything.

TodayWeather for Android: native app user manual

Version 2.0.0 preview, Korean screens. English instructions retain Korean control labels. Live examples captured on 13 November 2026; weather, ads and Android dialogs may vary.

44. Close the app

From the main screen, press Android Back. Read the exit confirmation. Cancel to keep using the app or confirm to close it.

Exit confirmation on the native app.

Expected result: Cancel keeps the app open. Back first closes an open dialog or page before reaching the exit prompt.
