

Spring: summary and detail

Open a Korean location and scroll to Weather details. The pollen risk label shows the highest available grade: Oak High and Pine Normal produce Pollen risk: High.

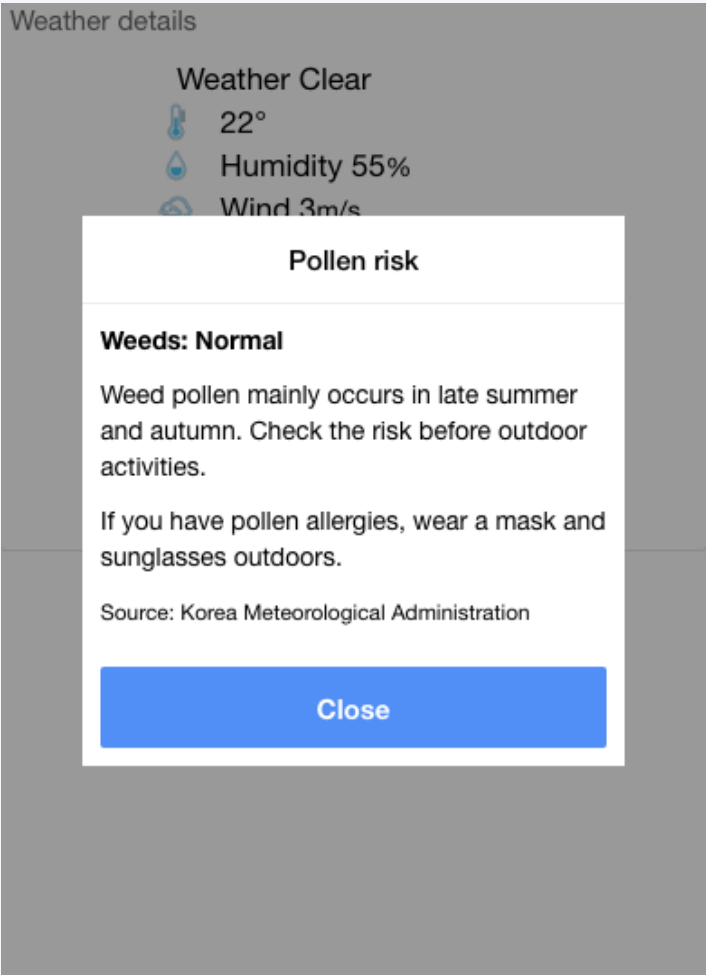

Tap the pollen row, or focus it and press Enter, to open the detail popup. Only Oak and Pine appear, each with its seasonal explanation and precautions for its own grade. Scroll when needed; choose Close to dismiss it.

UV remains a numeric index. Pollen labels are Low, Normal, High and Very high. Data: Korea Meteorological Administration, data.go.kr HealthWthrIdxServiceV3.

Autumn: only weeds

When only weeds have data, the representative risk is Normal. Open the pollen item to see Weeds: Normal. Oak and pine are absent. The popup includes weeds information and precautions.

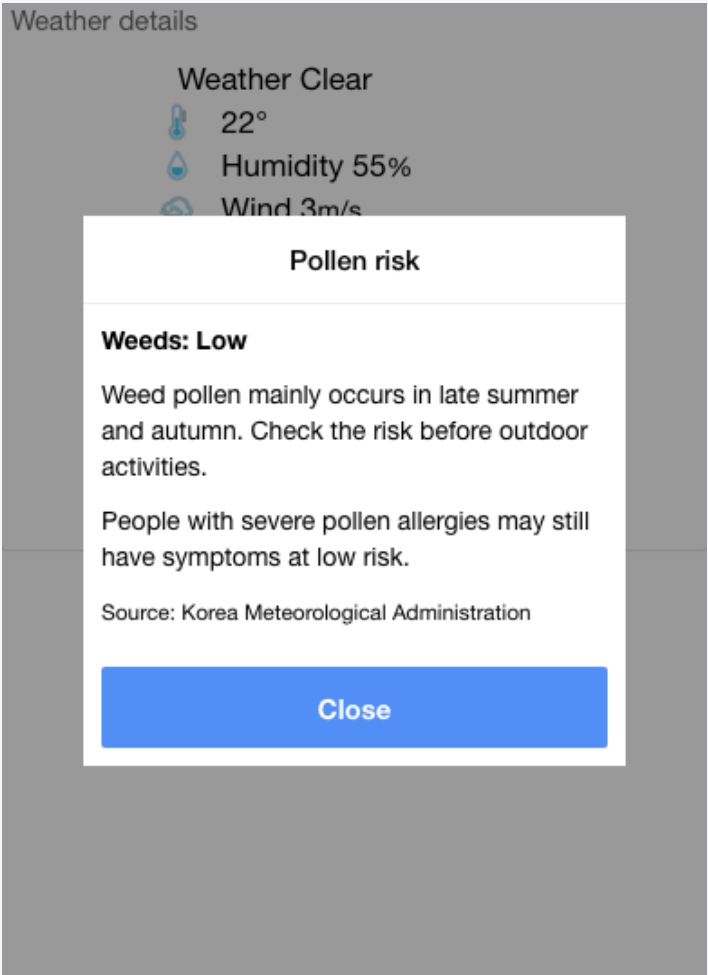

The three official categories are oak, pine and weeds. This predicted risk index is not a measured particle concentration.

UV remains a numeric index. Pollen labels are Low, Normal, High and Very high. Data: Korea Meteorological Administration, data.go.kr HealthWthrIdxServiceV3.

Low risk and unavailable data

Low is a valid risk grade. It remains visible and opens to Weeds: Low. Missing data is different: the pollen item disappears entirely.

No usable forecast can occur outside the publication season or during a provider outage. There is no zero placeholder and no numeric concentration.

UV remains a numeric index. Pollen labels are Low, Normal, High and Very high. Data: Korea Meteorological Administration, data.go.kr HealthWthrIdxServiceV3.
