

Your display preferences

Open Settings to choose appearance, weather background and text size. These settings belong to this browser.

Display and updates

Language

English

Starts with your browser language. Place names, summaries and alert text from the server appear in the languages the server supports.

Appearance

☒ System

☐ Light

☐ Dark

Current weather background

Weather sky

Text size

100%

Background motion

Start screen

Hourly weather

Auto refresh

30 min

Refreshes automatically only while the screen is open. When you come back, it also checks whether the data is current.

- 1. Choose System, Light or Dark. System follows your device appearance.
 - 2. Choose a weather background independently of appearance.
 - 3. Choose 130% text and reload. Your display choices remain saved.
- Expected:** Display choices survive reload and an older build's legacy theme update.

If unavailable: A storage warning means the current choices work in memory but may not survive closing the browser.

Compare hourly weather

The hourly chart compares today's forecast with yesterday. Only the chart scrolls horizontally.

- 1. Scroll the chart to later hours, or focus it and use Left, Right, Home and End.
- 2. Read the highlighted value and the shared temperature axis.
- 3. Expand wind and humidity, or open the table for the same hourly values.

Expected: All supplied hours remain available. A missing temperature leaves a gap in the line.

If unavailable: A dash means no supplied value; a missing yesterday series does not produce an invented comparison.

Daily forecast

Low / High

Yesterday Tue, 9/22	Today Wed, 9/23	Tomorrow Thu, 9/24
		AM  PM 
—	—	30%
—	—	—
25°	26°	27°
		
17°	18°	19°

Today Wed, 9/23 · 18°–26° · Sunny · Rain probability — · Precipitation — · Current 21°

► Chart data table

- If unavailable:** An incomplete range has no bar. The missing value is a dash; any supplied extremum remains on the shared scale.

Read air information

Open Air quality to compare the available pollutant readings and grade wording.

- 1. Choose an available pollutant. Keyboard arrow keys move between radio choices.
 - 2. Read its grade, value and source time.
 - 3. Open the forecast table when forecast data is supplied.
- Expected:** The selected reading and table use the same supplied data and selected air unit.
- If unavailable:** Unavailable pollutants or life indices are omitted. Stale data remains visibly labelled.

Make text easier to read

Text size in Settings is independent of device text size. Language and light/dark appearance can be changed together.

Display and updates

Language English ▾

Starts with your browser language. Place names, summaries and alert text from the server appear in the languages the server supports.

Appearance

☒ System ☐ Light ☐ Dark

Current weather background Weather sky ▾

Text size 130% ▾

Background motion ☐

Start screen Hourly weather ▾

Auto refresh 30 min ▾

Refreshes automatically only while the screen is open. When you come back, it also checks whether the data is current.

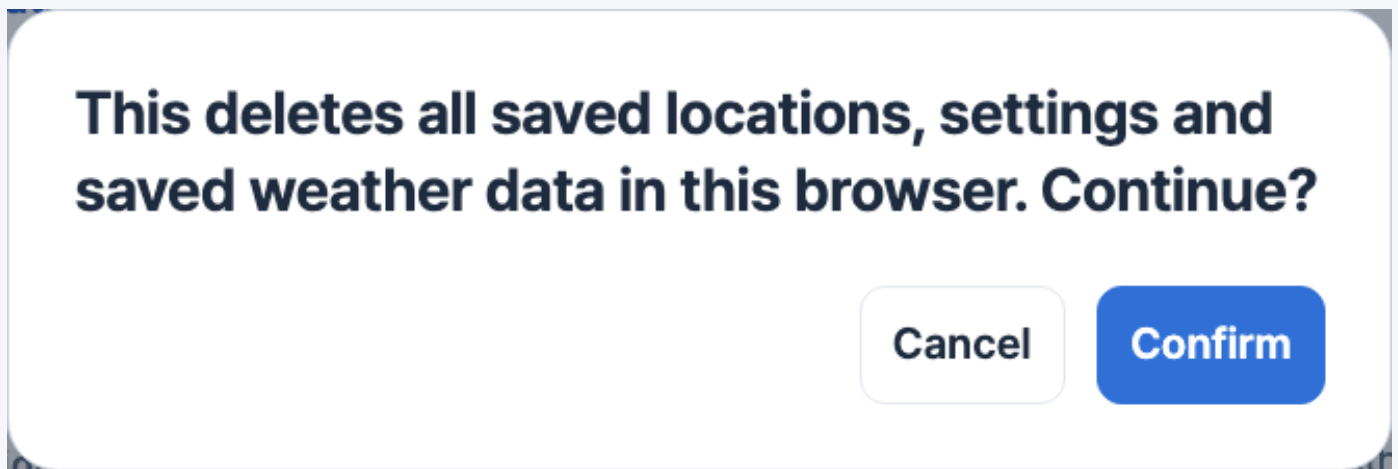

1. Choose the language and 130% text size.
2. Check Weather, Air quality and Settings; scroll chart content as needed.
3. On iOS, the system comparison uses the nearest step: 23pt versus 17pt, approximately 135%.

Expected: App 130% scales PWA text by 1.3. The iOS system step is a separate comparison, not an exact 130% setting.

If unavailable: The installed Cordova app may keep fixed CSS text sizes. Device measurements are documented separately.

Manage saved browser data

Settings offers export, import and deletion of saved browser data. Export a copy before deliberately deleting it.

1. Request deletion. The confirmation opens with Cancel focused.
 2. Use Cancel or Escape to keep your data and return focus to the trigger.
 3. Confirm only when you intend to reset saved places, snapshots and display preferences.
- Expected:** Cancel preserves saved data. Confirm resets this browser's TodayWeather data.
- If unavailable:** Storage or import errors are reported. Import replaces saved places only after confirmation.

Reproduce this version

Maintainers can reproduce the shared design-token consumer from a clean repository checkout. See the [editable manual](#) and dated evidence alongside this PDF.

The screenshot shows a settings panel titled "Display and updates". It contains several configuration options:

- Language:** A dropdown menu currently set to "English".
- Appearance:** A section with three radio buttons: "System" (selected), "Light", and "Dark".
- Current weather background:** A dropdown menu currently set to "Weather sky".
- Text size:** A dropdown menu currently set to "100%".
- Background motion:** A toggle switch currently turned off.
- Start screen:** A dropdown menu currently set to "Hourly weather".
- Auto refresh:** A dropdown menu currently set to "30 min".

Below the settings, there is a descriptive text: "Refreshes automatically only while the screen is open. When you come back, it also checks whether the data is current."

1. Install locked dependencies with `npm ci`, then run `npm run typecheck` and `npm test`.
2. Run `npm run build:web`; the token generation hooks run automatically.
3. Run the documented browser checks. Rebuild this PDF with `python scripts/verification/pwa-manual-pdf.py`.

Expected: Generated tokens are deterministic. The build contains the hashed Pretendard font and its OFL license.

If unavailable: A missing browser, Python package or device is a prerequisite failure, not a passing verification.
